

Bug Bounty Switzerland

Safe platform for bug bounty programs.

UX / UI / Development

Workshops: Creating an App for Bug Bounty Switzerland

1

Workshop aimed at understanding core project objectives.

2

Collaboration with Bug Bounty Switzerland for dynamic requirements.

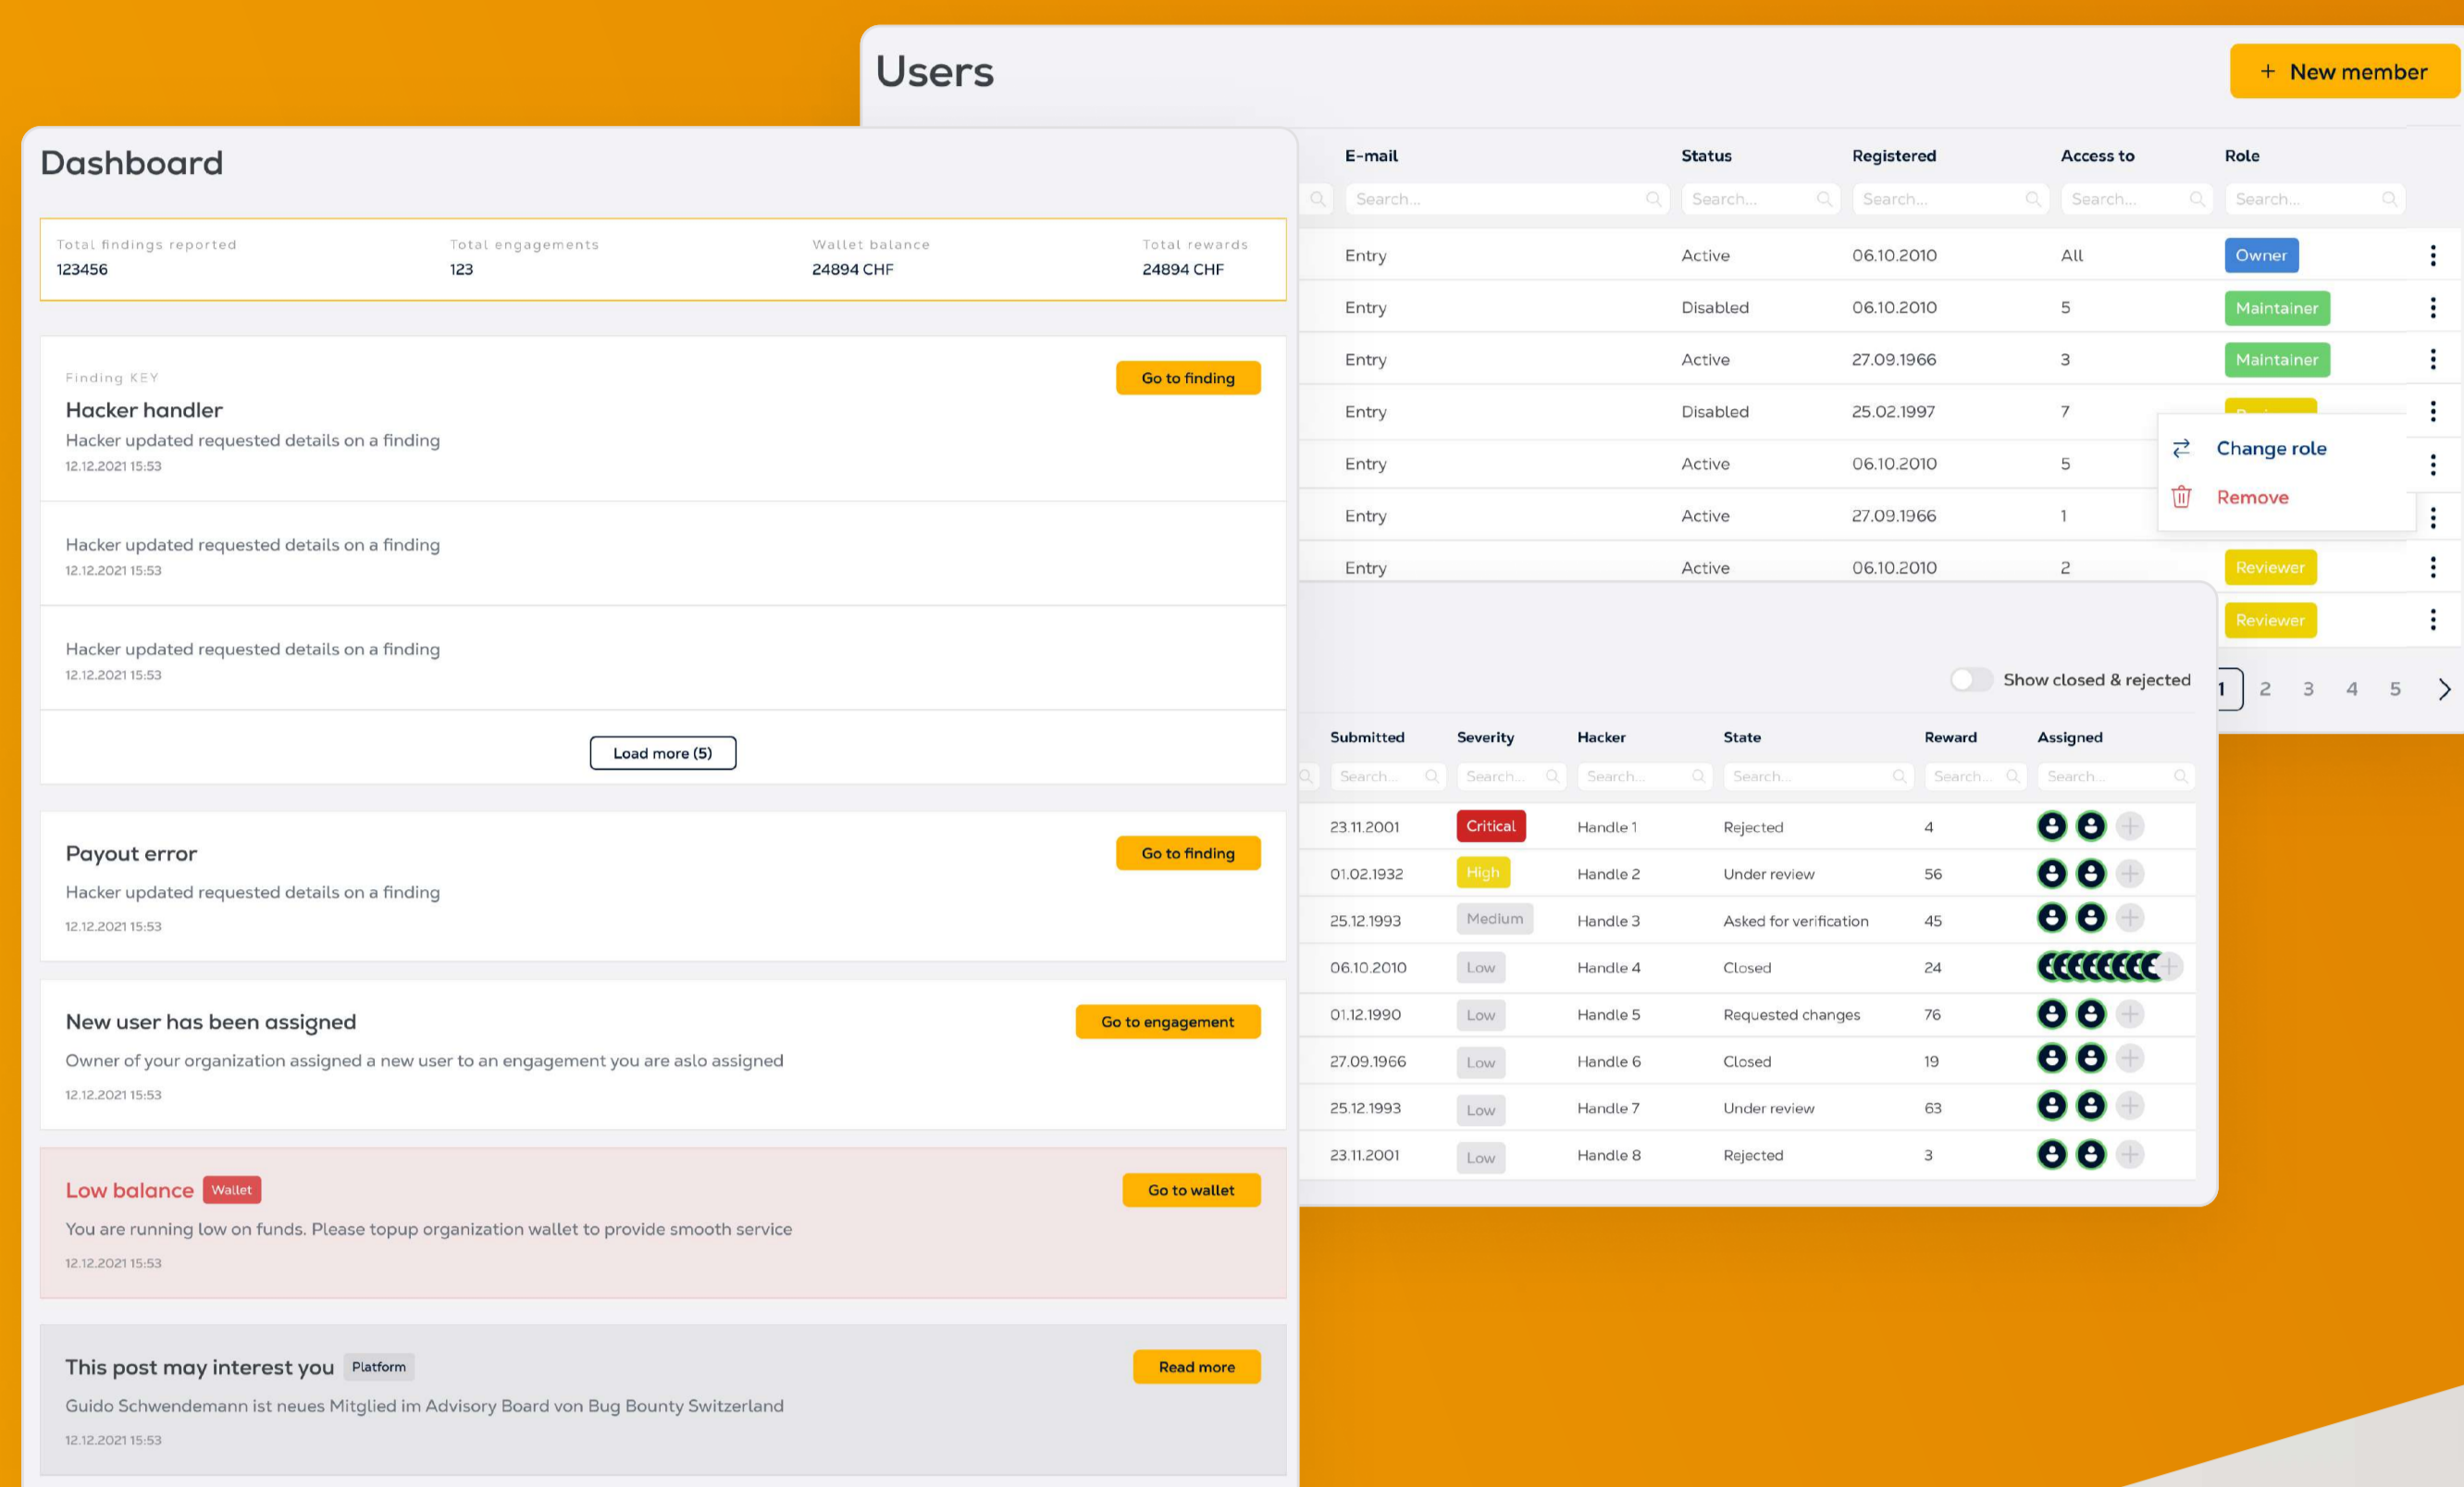

3

Thorough planning and wireframing for application structure.

Designs

In the design phase, we thoroughly understood the project's core objectives and collaborated closely with Bug Bounty Switzerland to address dynamic requirements.

We created wireframes and user stories to shape the application's structure.

Mockup

For the mockup phase, we generated interactive mockups of the user interface using Figma, taking advantage of paper prototyping for initial concept visualization.

Testing

We developed prototypes for user testing, collecting invaluable feedback.

This iterative process allowed us to fine-tune the design and make data-driven decisions, ensuring the application's user-friendliness.

Coding

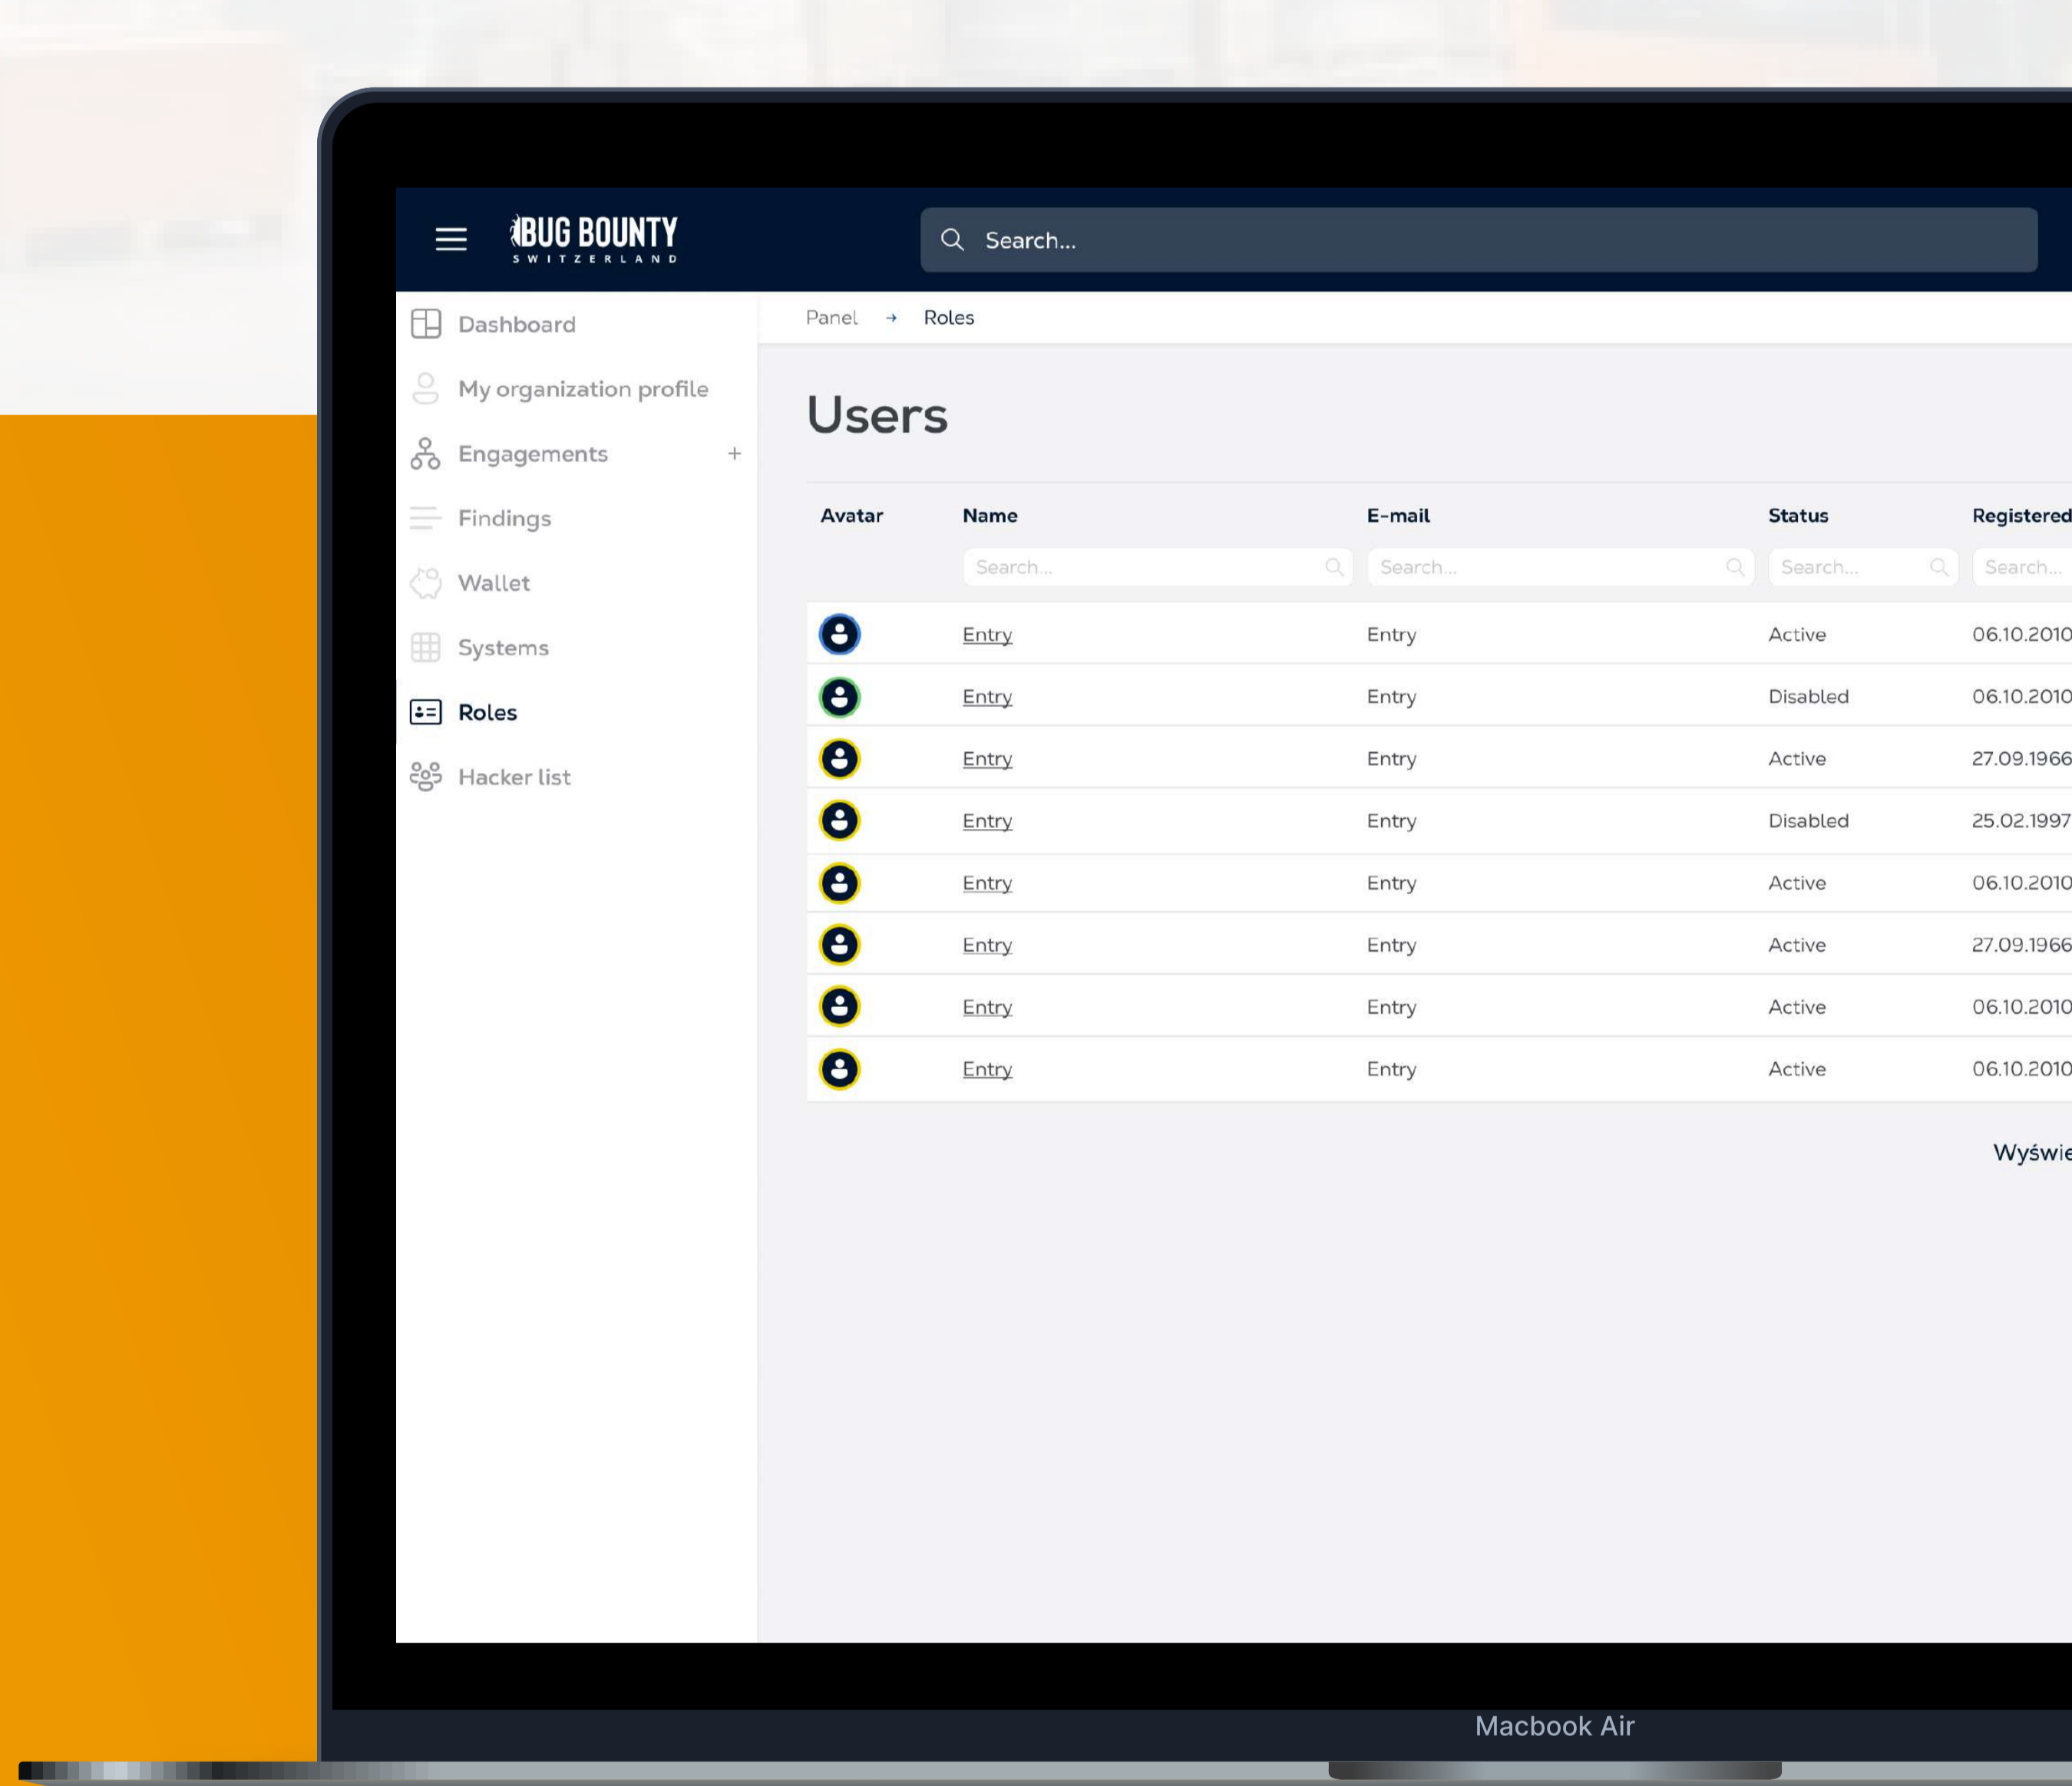

With a well-defined design and user experience, our Angular development team closely collaborated with the client's back-end experts to bring the platform to life.

Leveraging the "300DEVS Angular CDK" ecosystem, we ensured swift development while maintaining consistency.

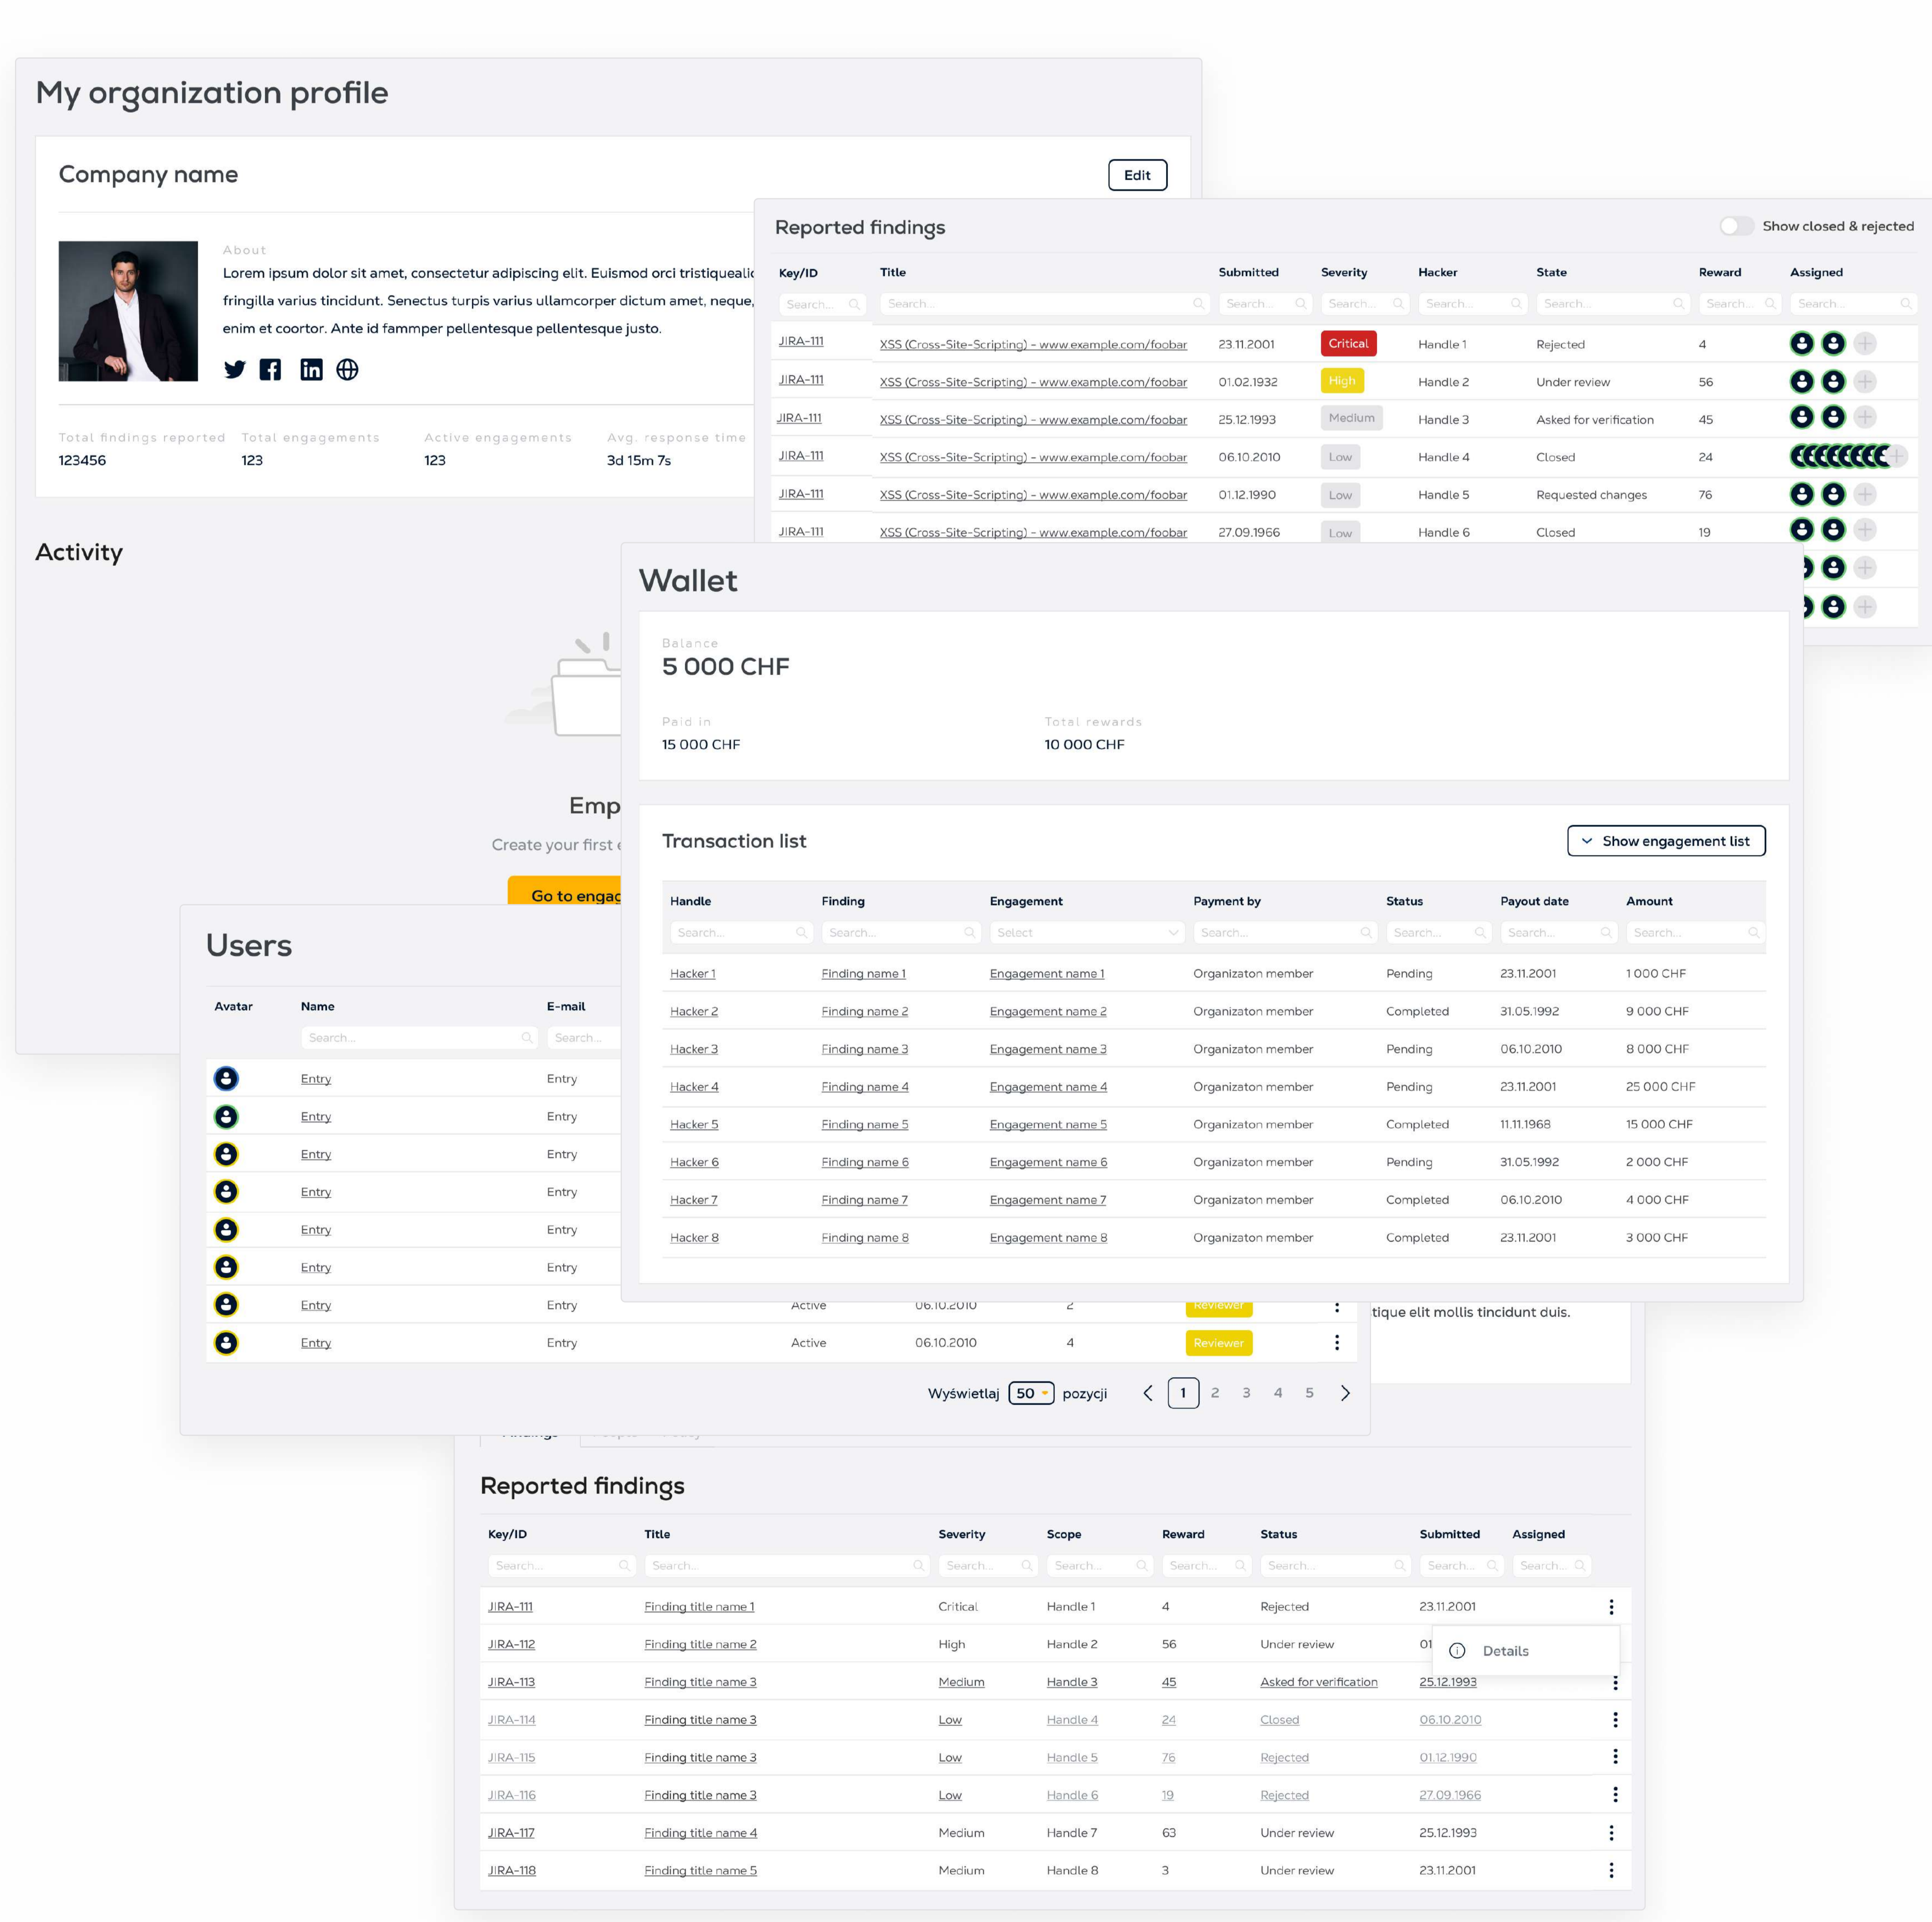

Results

We successfully implemented the platform's first version, ready for user testing, and prepared comprehensive mock-ups for future deployment.

Collaboration with Bug Bounty Switzerland, Evux, and 300DEVS enabled efficient progress, and the application is poised for future development with user insights.

Our achievements highlight our commitment to creating the perfect solution for you. Contact us to discuss tailoring an application to your specific needs.
