

During the mockup phase, we transformed the application's design concepts into concrete representations using Figma.

We collaborated closely with the client to create user stories and wireframes, aligning our design objectives with the project's goals.

Testing

We implemented rigorous testing procedures to ensure the application's functionality and security met the highest standards and were free from legal defects.

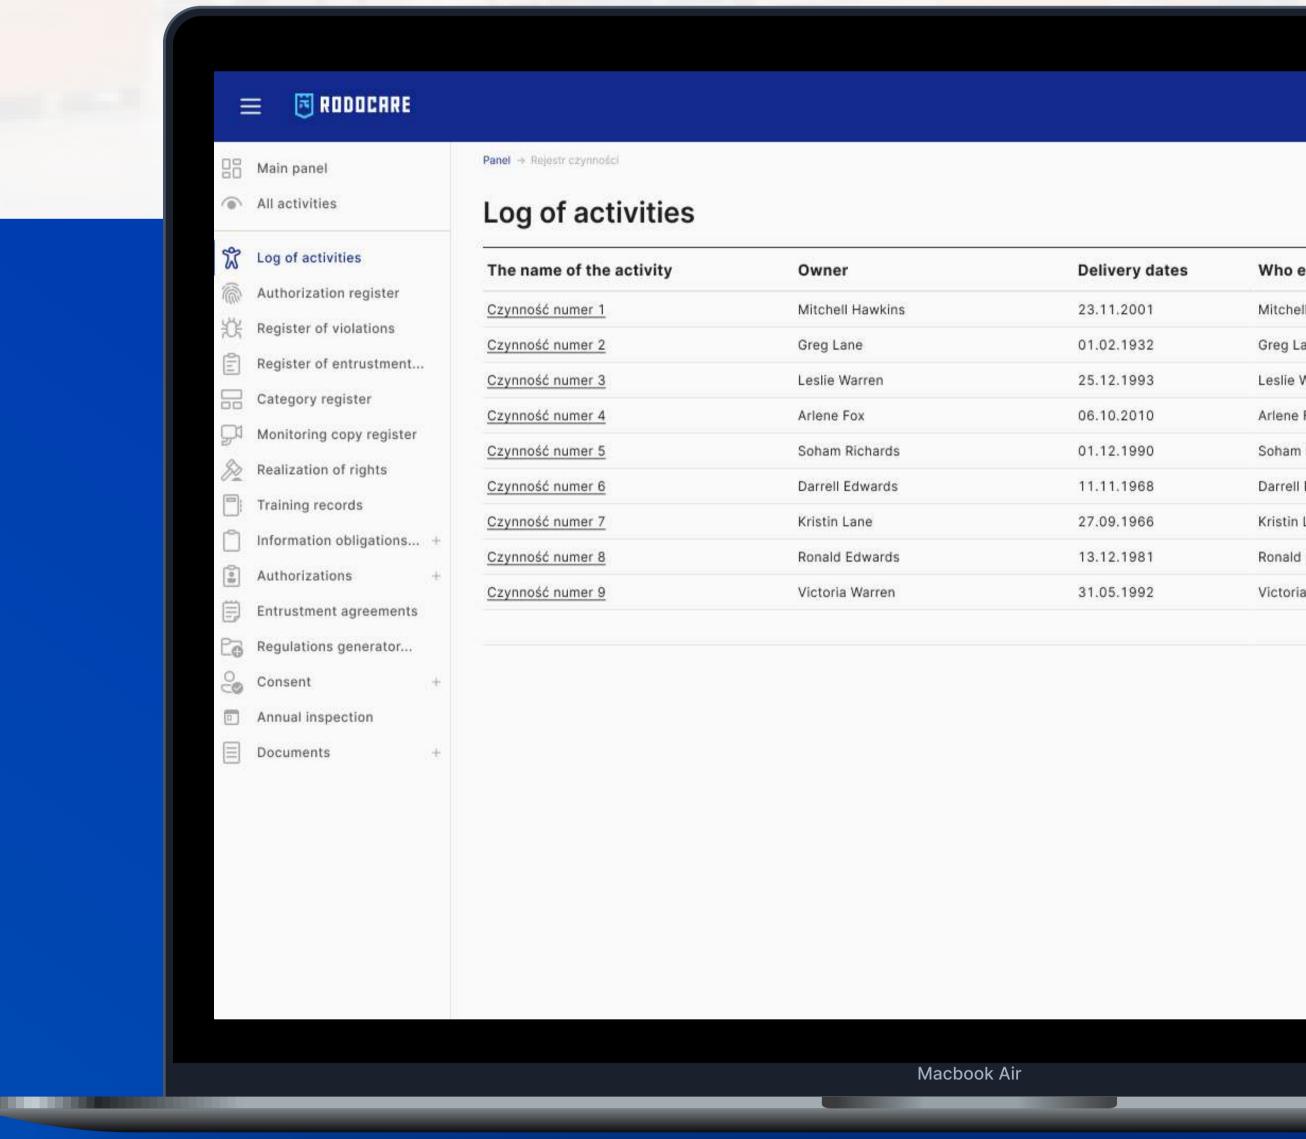

Coding

The development of our application leveraged the 300DEVS Angular CDK, featuring NGRX for state management and efficient synchronization between reusable components. This approach allowed for quick implementation and compliance with the DRY principle.

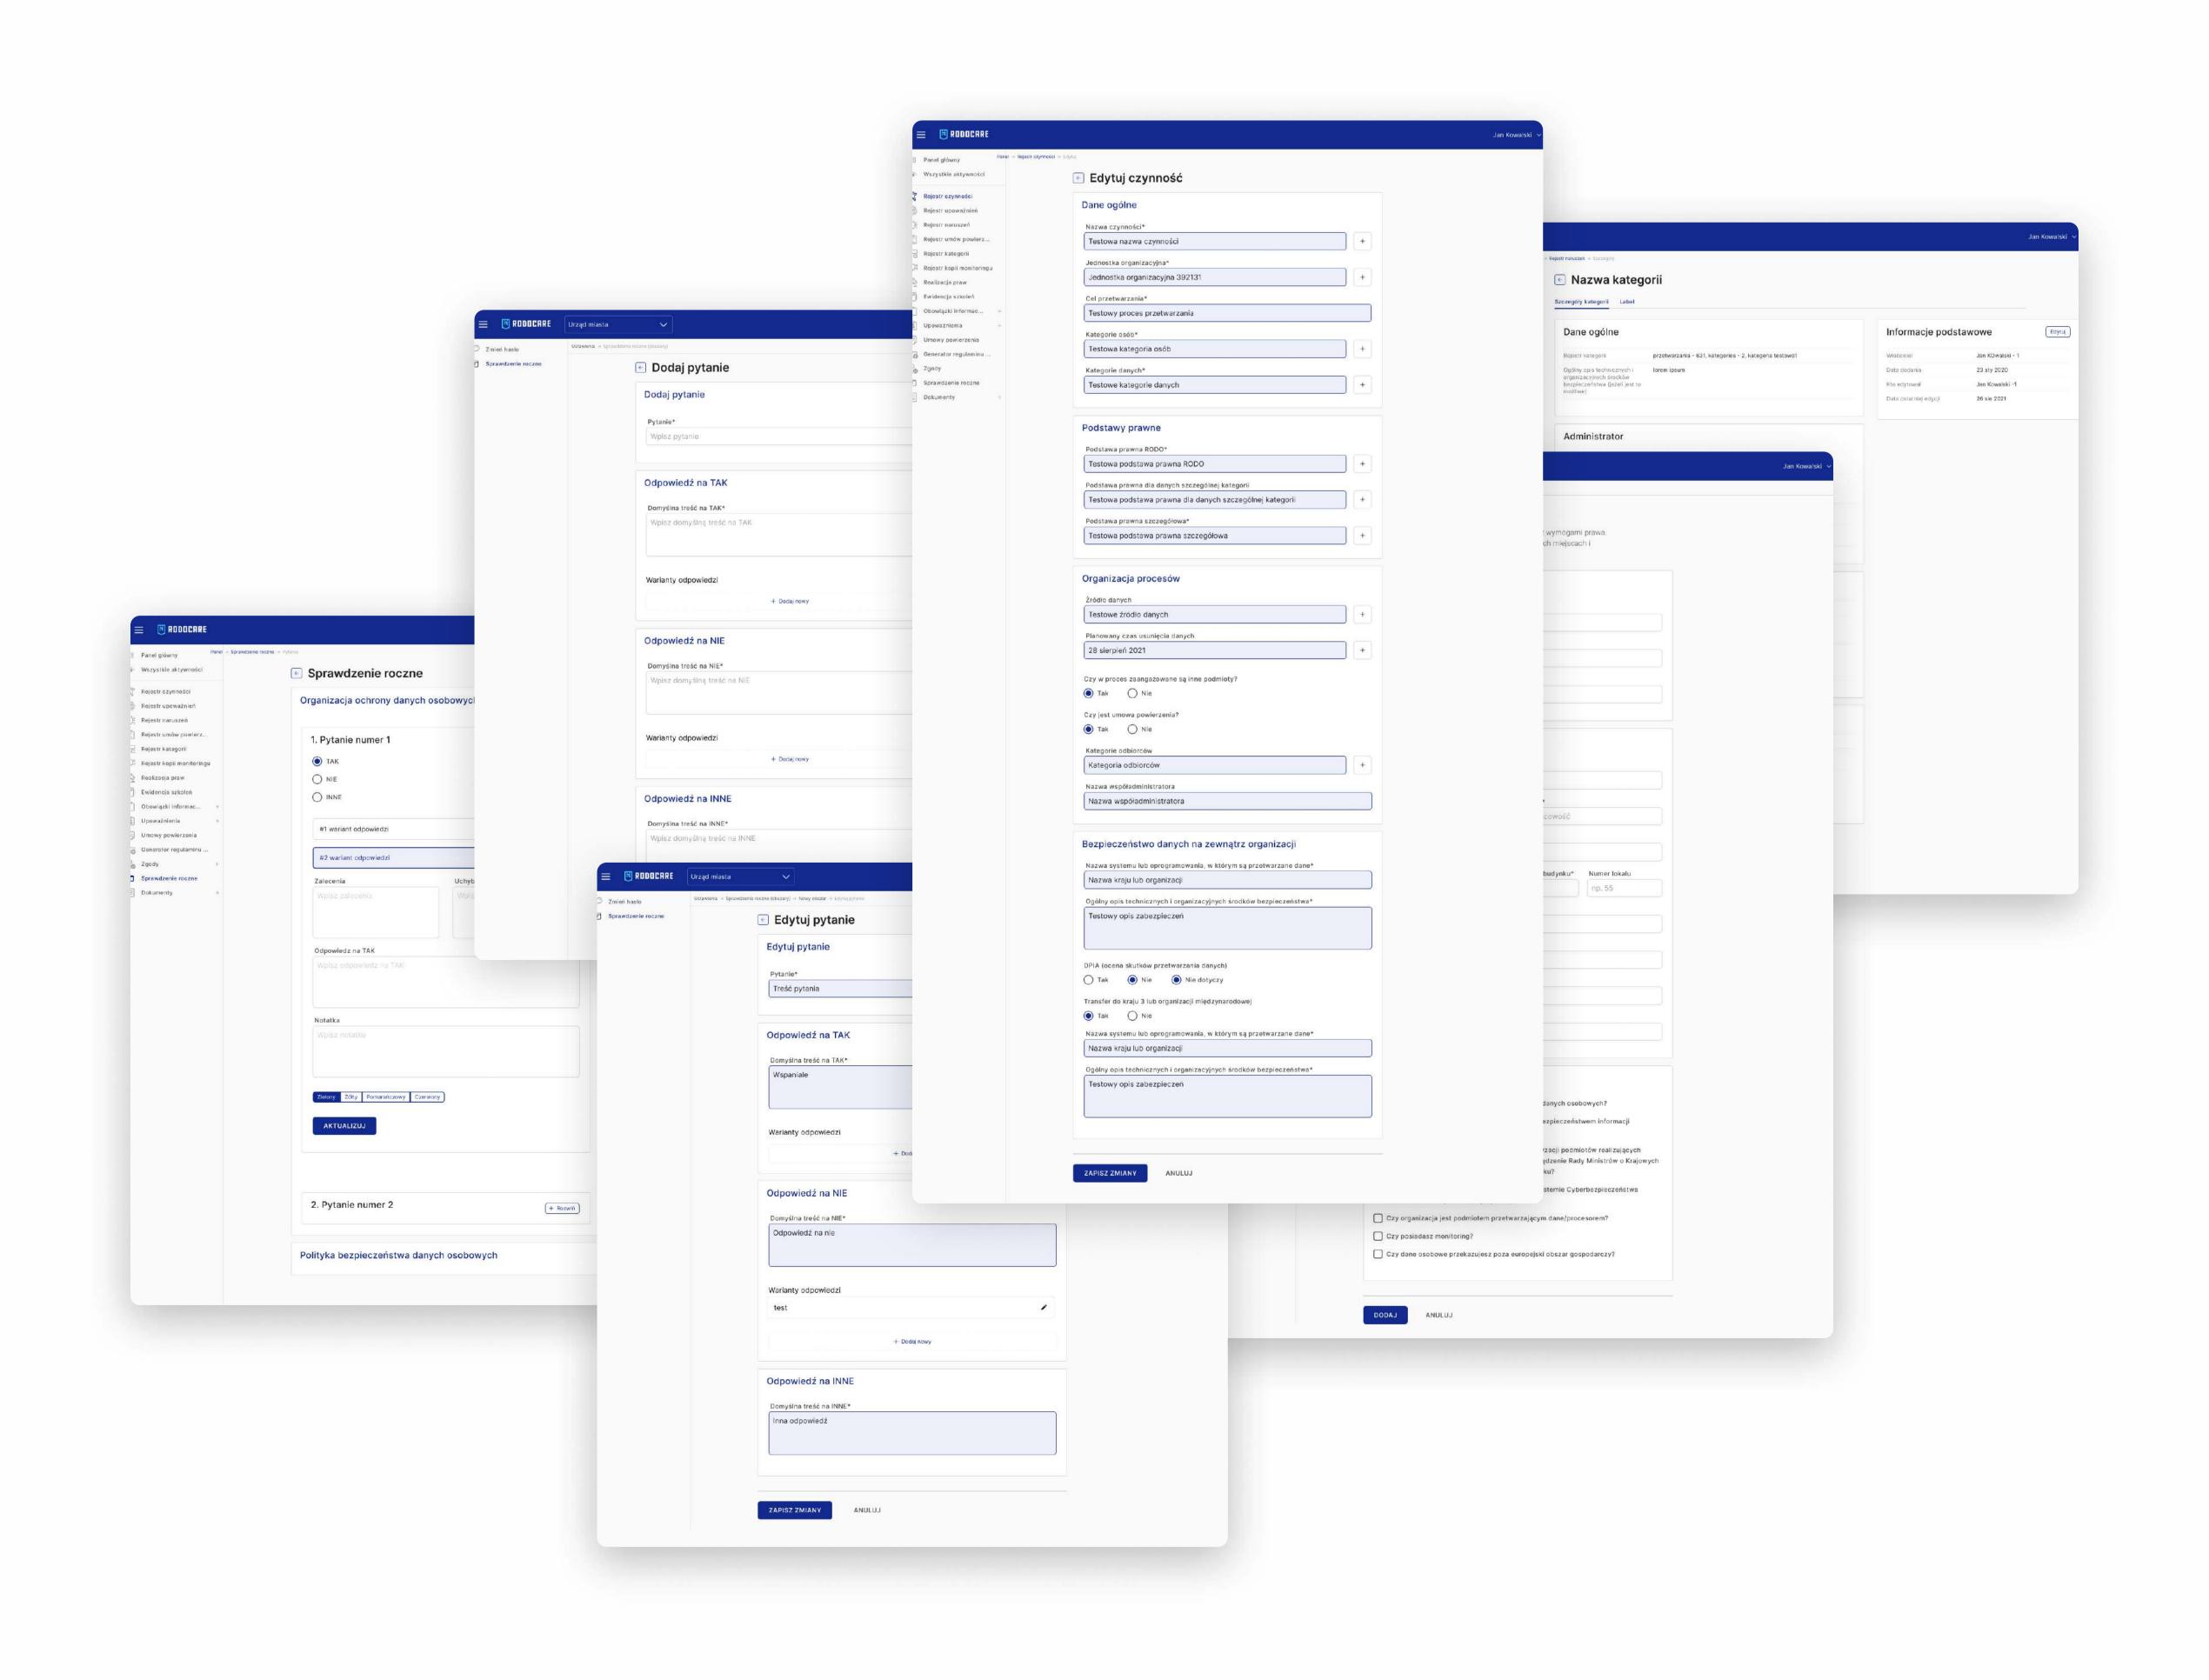

The end result is a comprehensive application for managing personal data, ensuring GDPR compliance.

It offers an intuitive guide for handling data, simplifying document creation, and providing support and training to users in an easy-to-use interface.

Our achievements highlight our commitment to creating the perfect solution for you. Contact us to discuss tailoring an application to your specific needs.
