# Vortex

Custom web application for retail stores.

UX / UI / Development

Workshops: Creating an App for Vortex

1 The workshop centered on user interface design, order tracking, and inventory management.

2 Technologies, tools, testing, and deployment strategies were explored for efficient development.
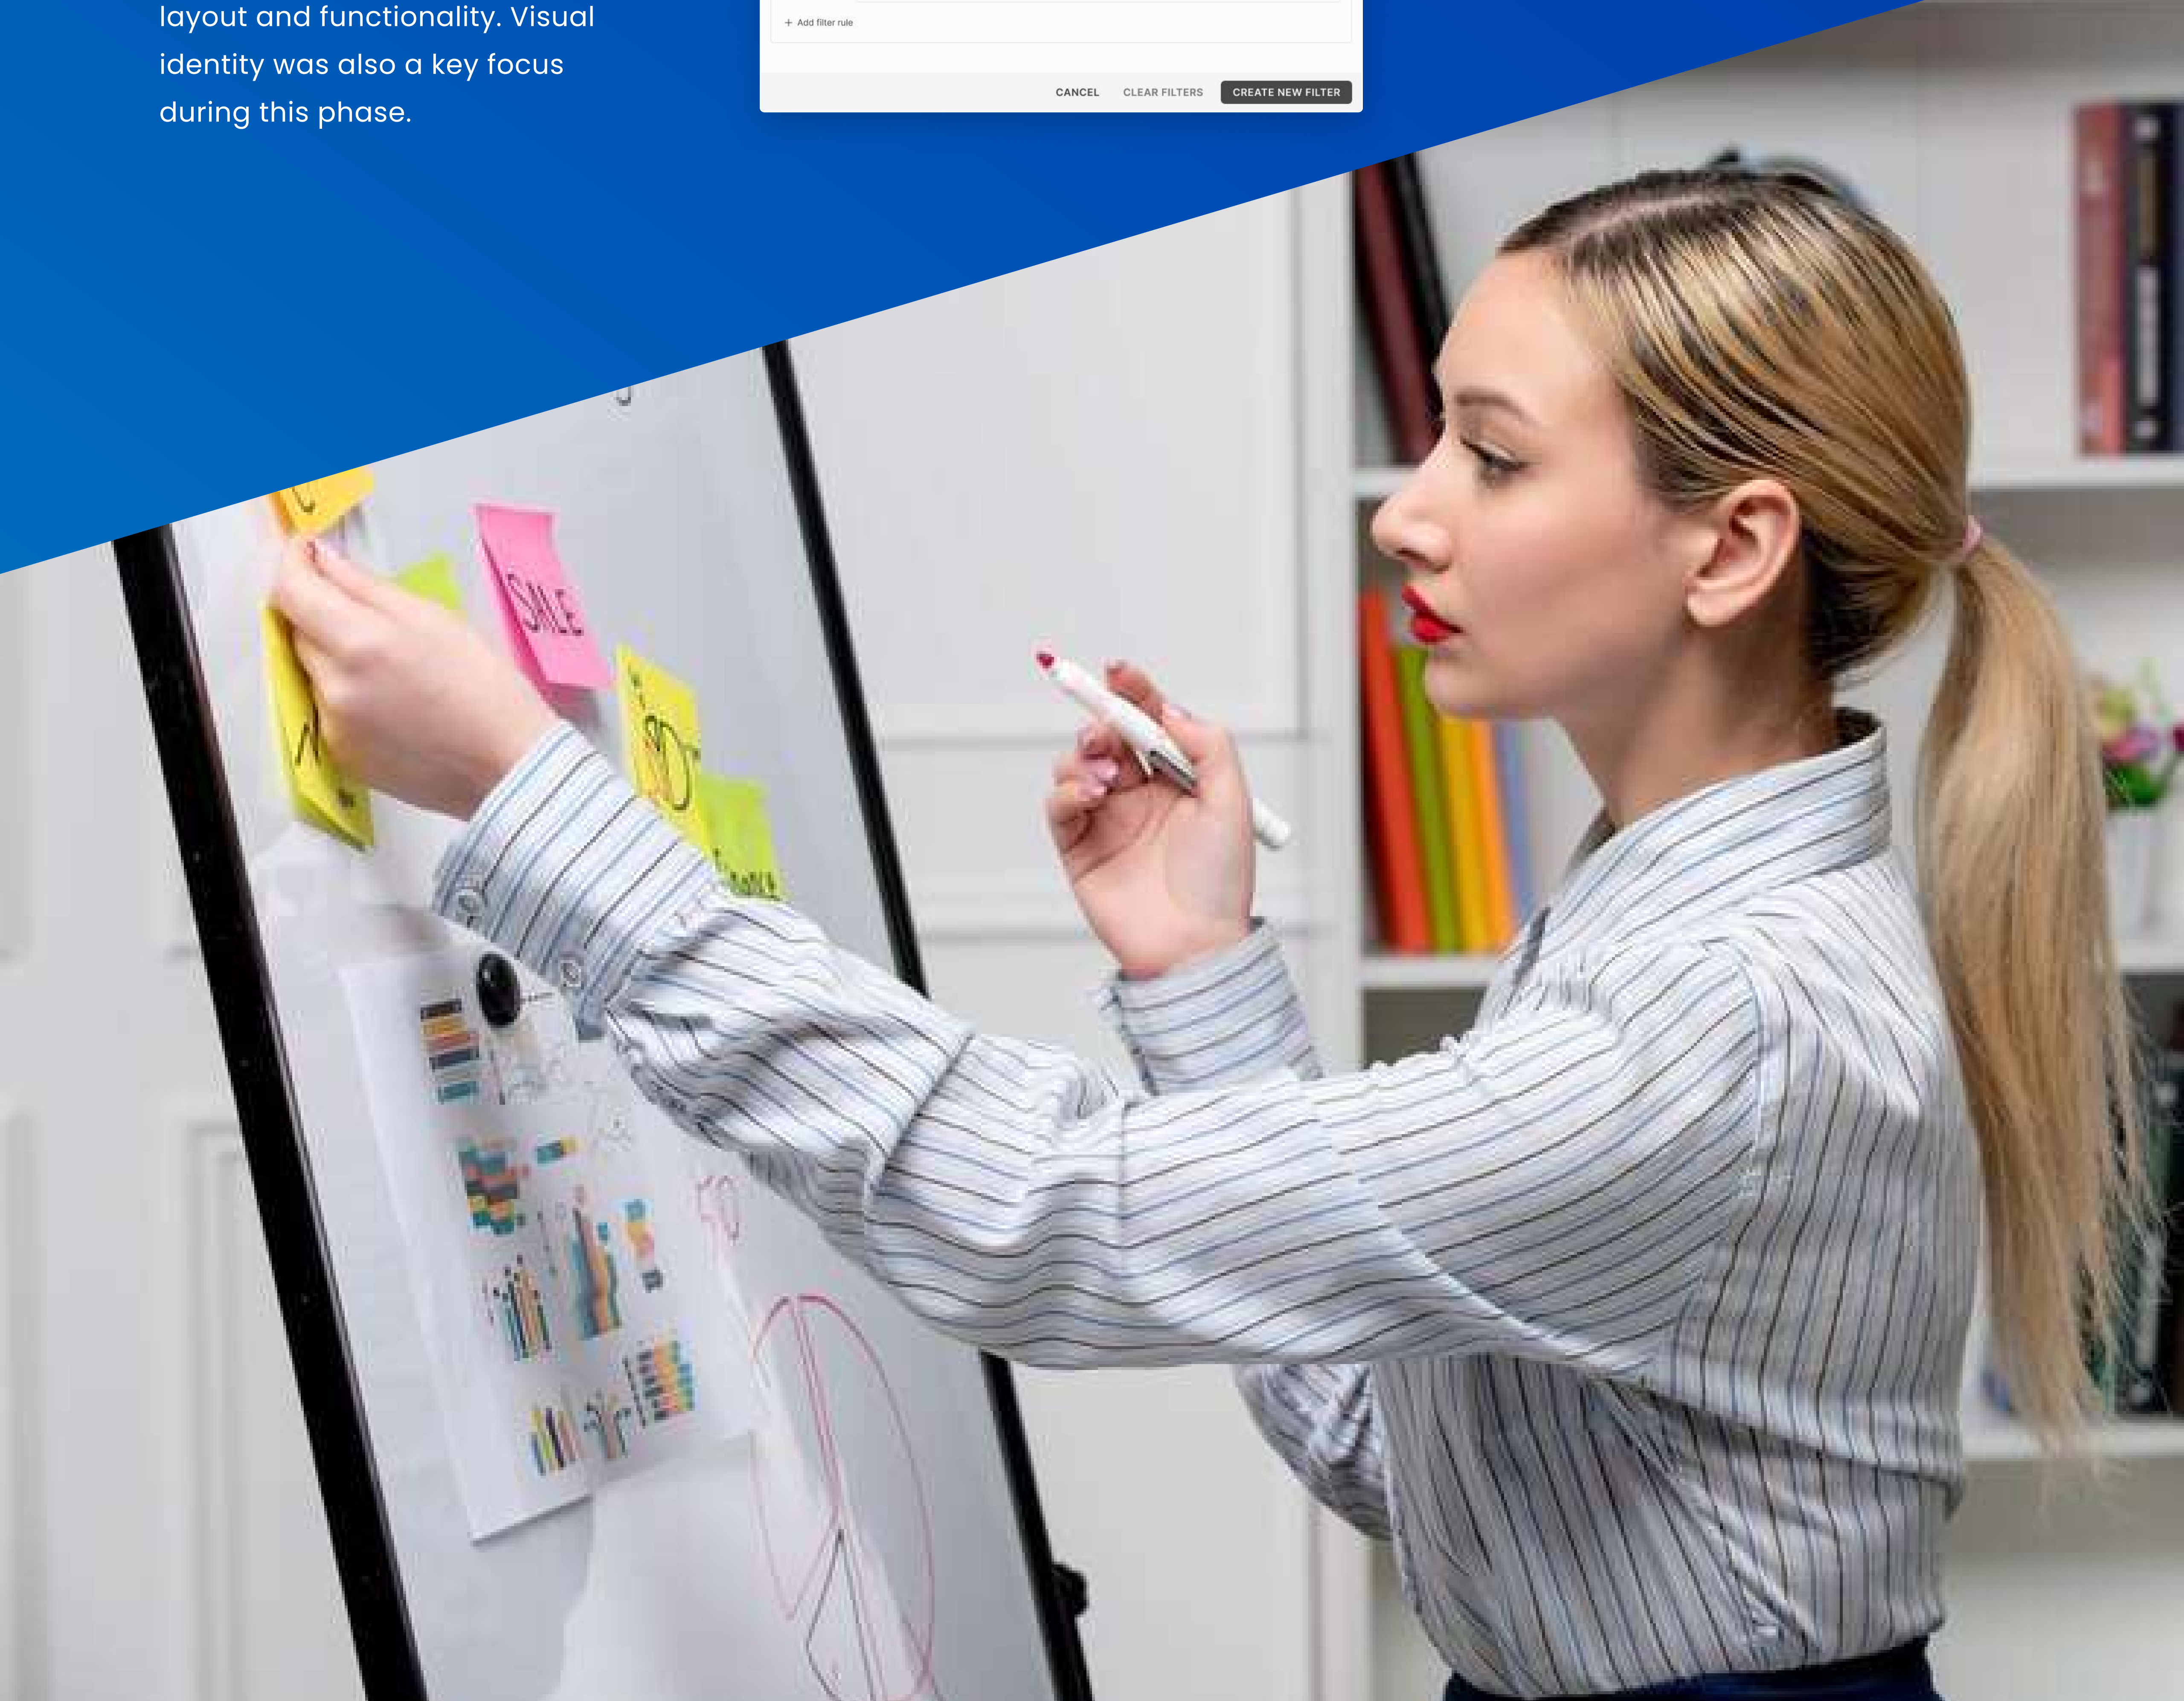

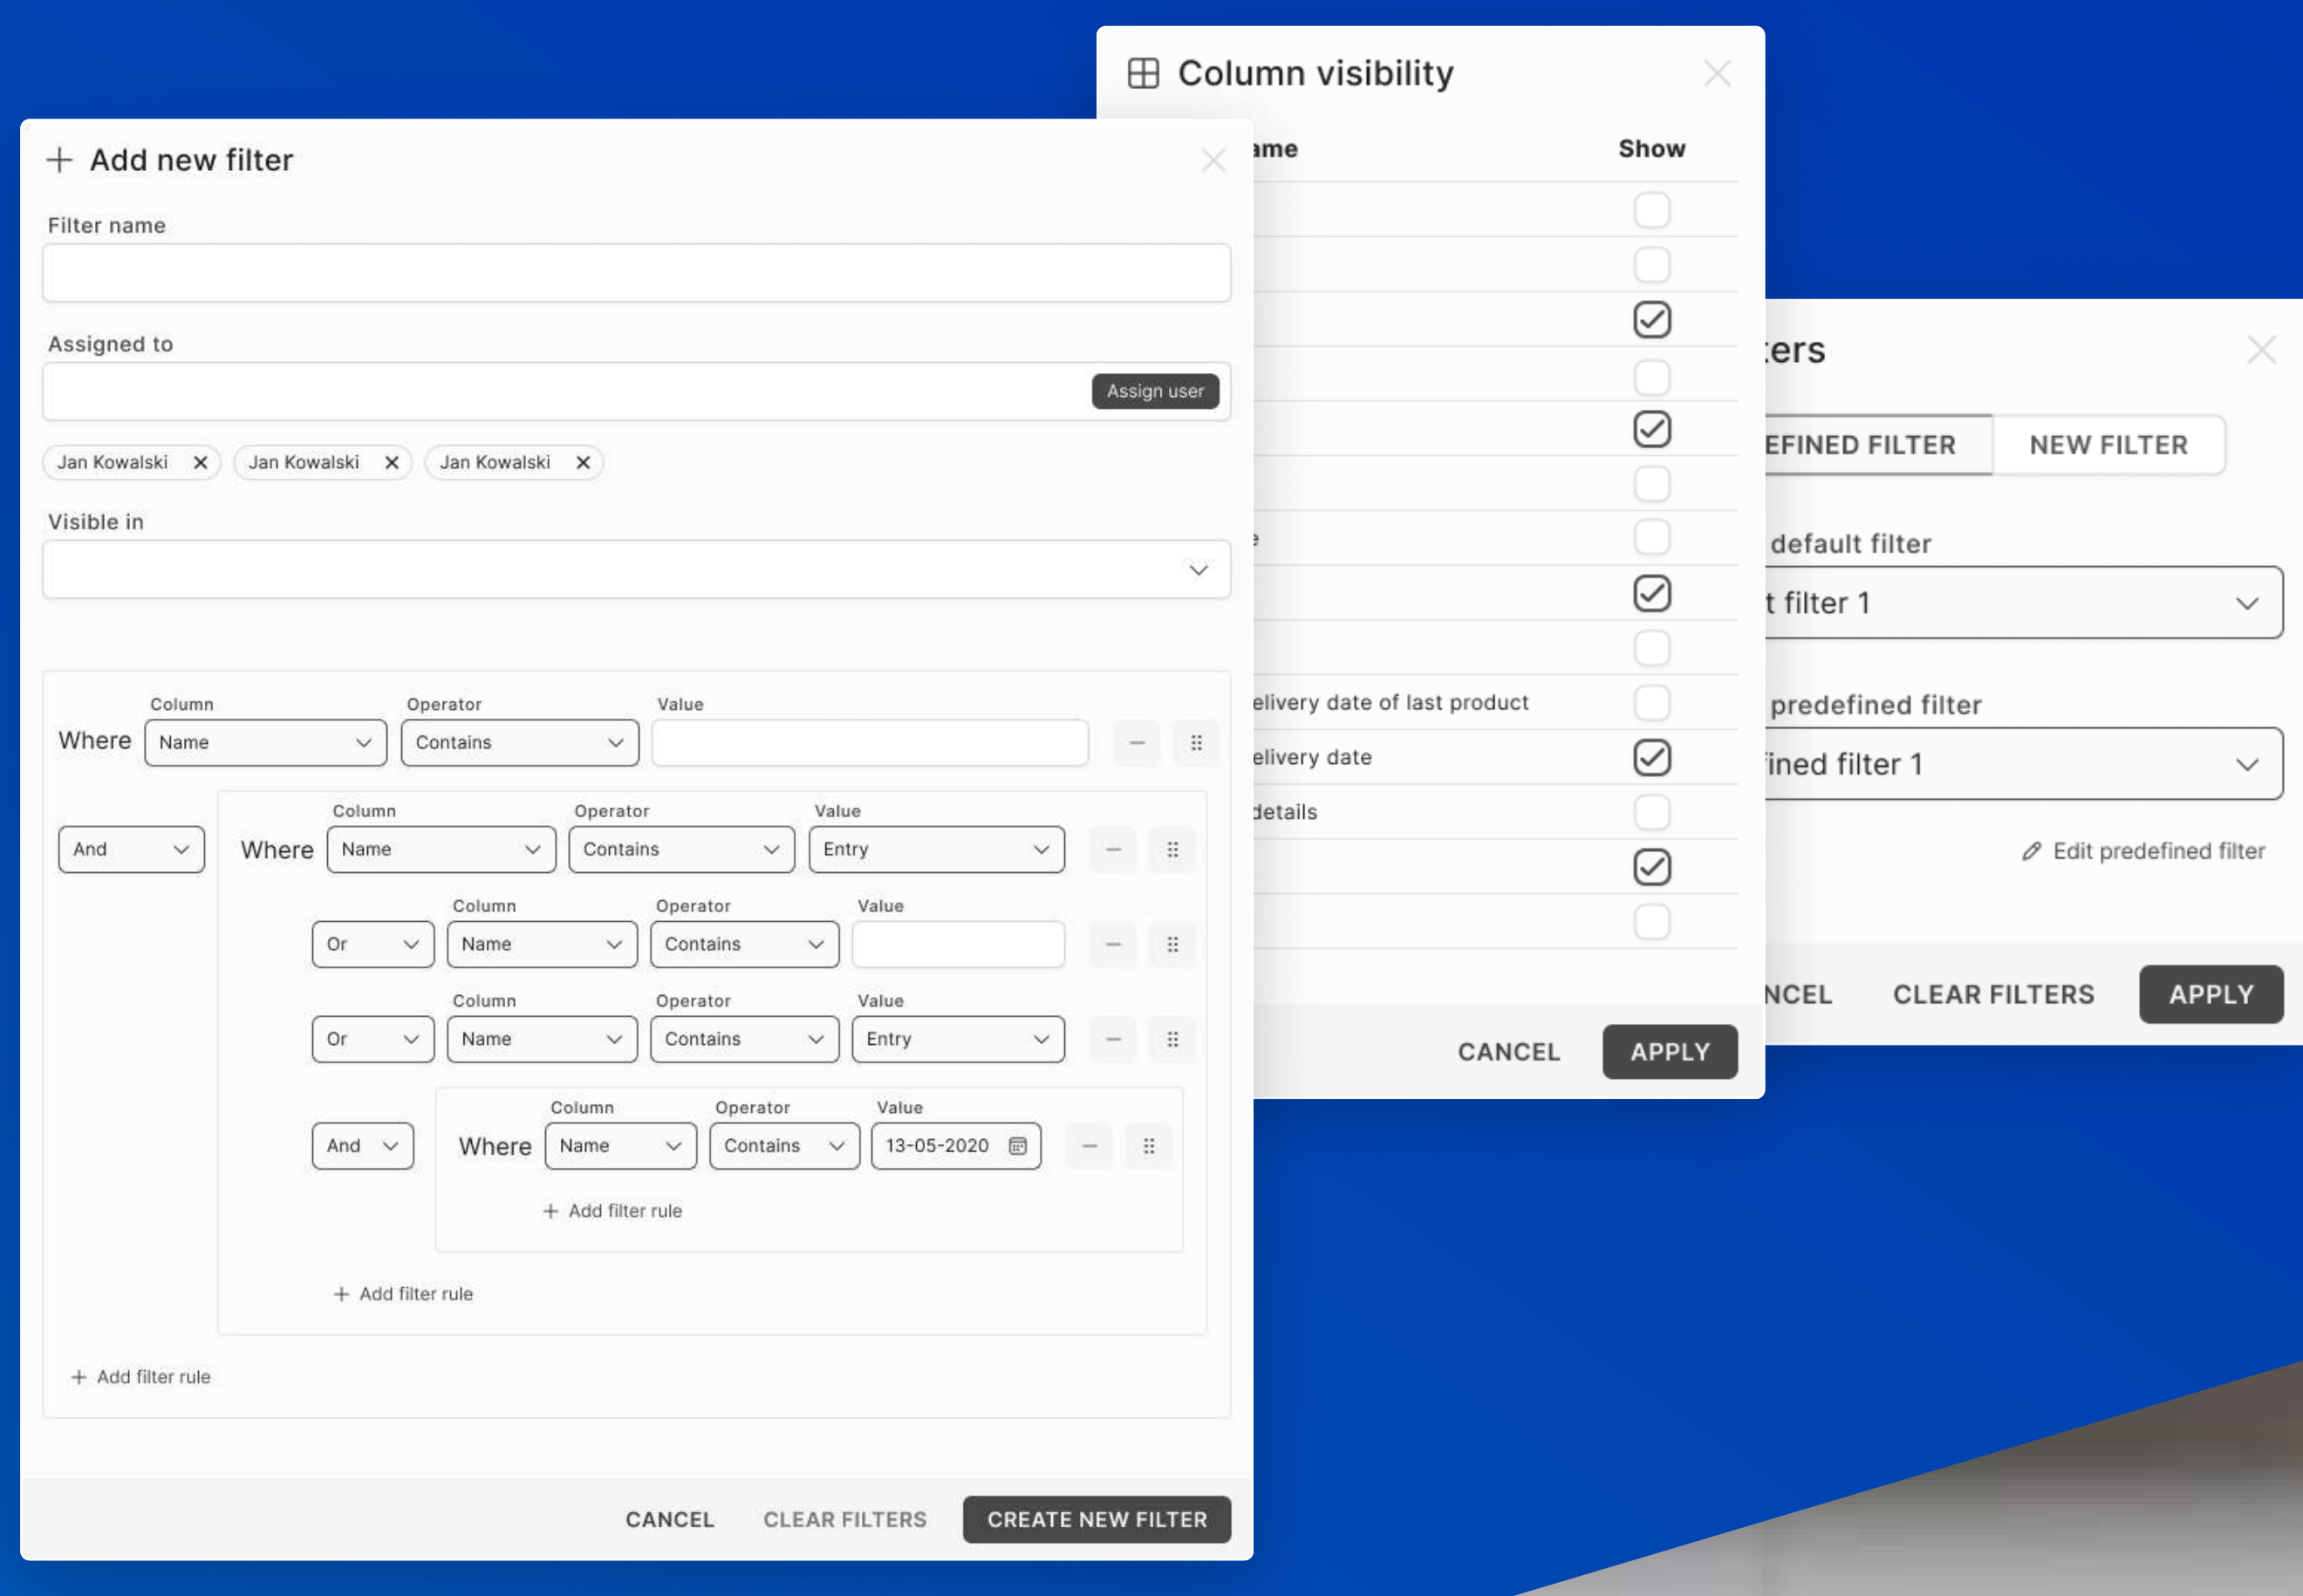

3 The workshop covered release preparation and future development prospects for Vortex.

Designs

The project began with a thorough design phase, where core objectives and user requirements were established.

Detailed wireframes and user stories were crafted to visualize the application's layout and functionality. Visual identity was also a key focus during this phase.

Mockup

The mockup stage included creating a user-friendly interface with 300DEVS Angular CDK and Google Material components.

Advanced tools and libraries reduced redundant code and maintained high implementation standards.

Testing

The application underwent rigorous testing for quality and user satisfaction. Ongoing post-deployment monitoring and evaluation ensured alignment with objectives and evolving user needs.

User feedback and performance data analysis drove informed decisions and improvements.

Coding

NGRX facilitated efficient state management and component synchronization.

Advanced tools and libraries reduced code redundancy and improved implementation standards.
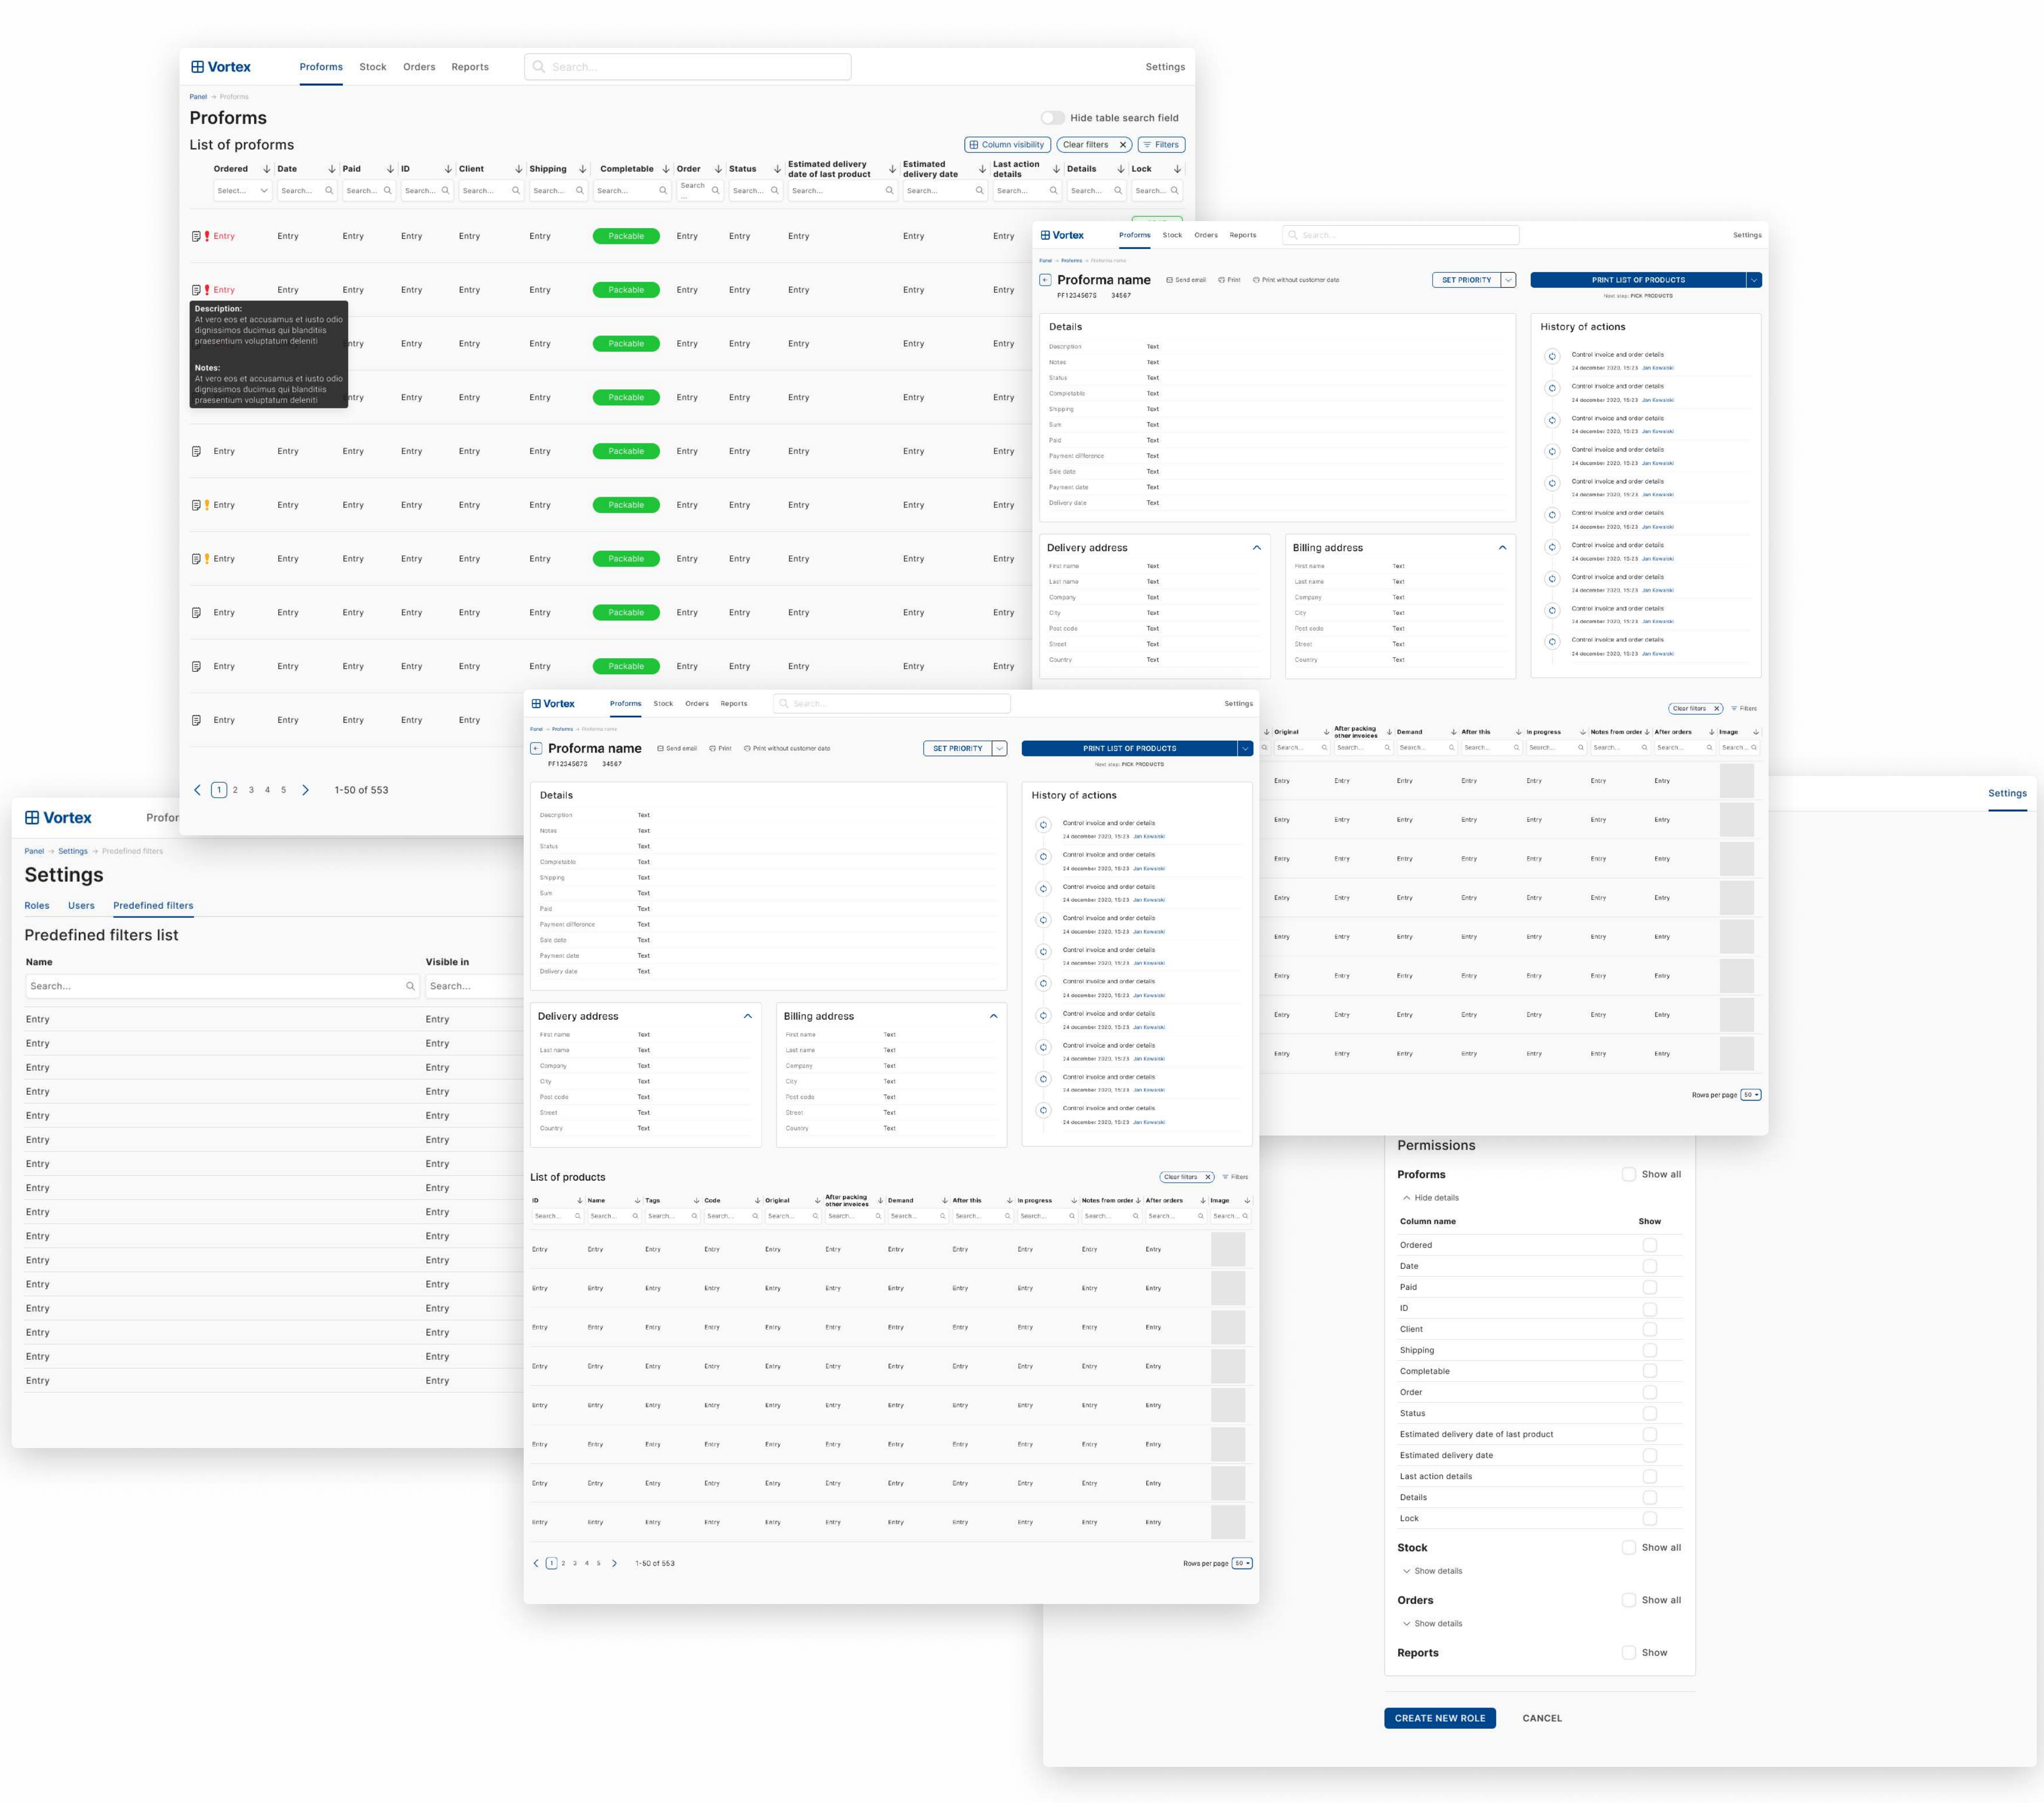

Results

The successful deployment marked the culmination of the development process, ensuring user accessibility.

Continuous commitment to enhancement maintains user satisfaction and efficiency.

Achievements emphasize our dedication to crafting ideal solutions for clients.

Our achievements highlight our commitment to creating the perfect solution for you. Contact us to discuss tailoring an application to your specific needs.

Let's talk about your project!
