

ZIU

Design and implementation of intuitive exam results app.

Workshops:

1
Creation of an Efficient Exam Results Reading System

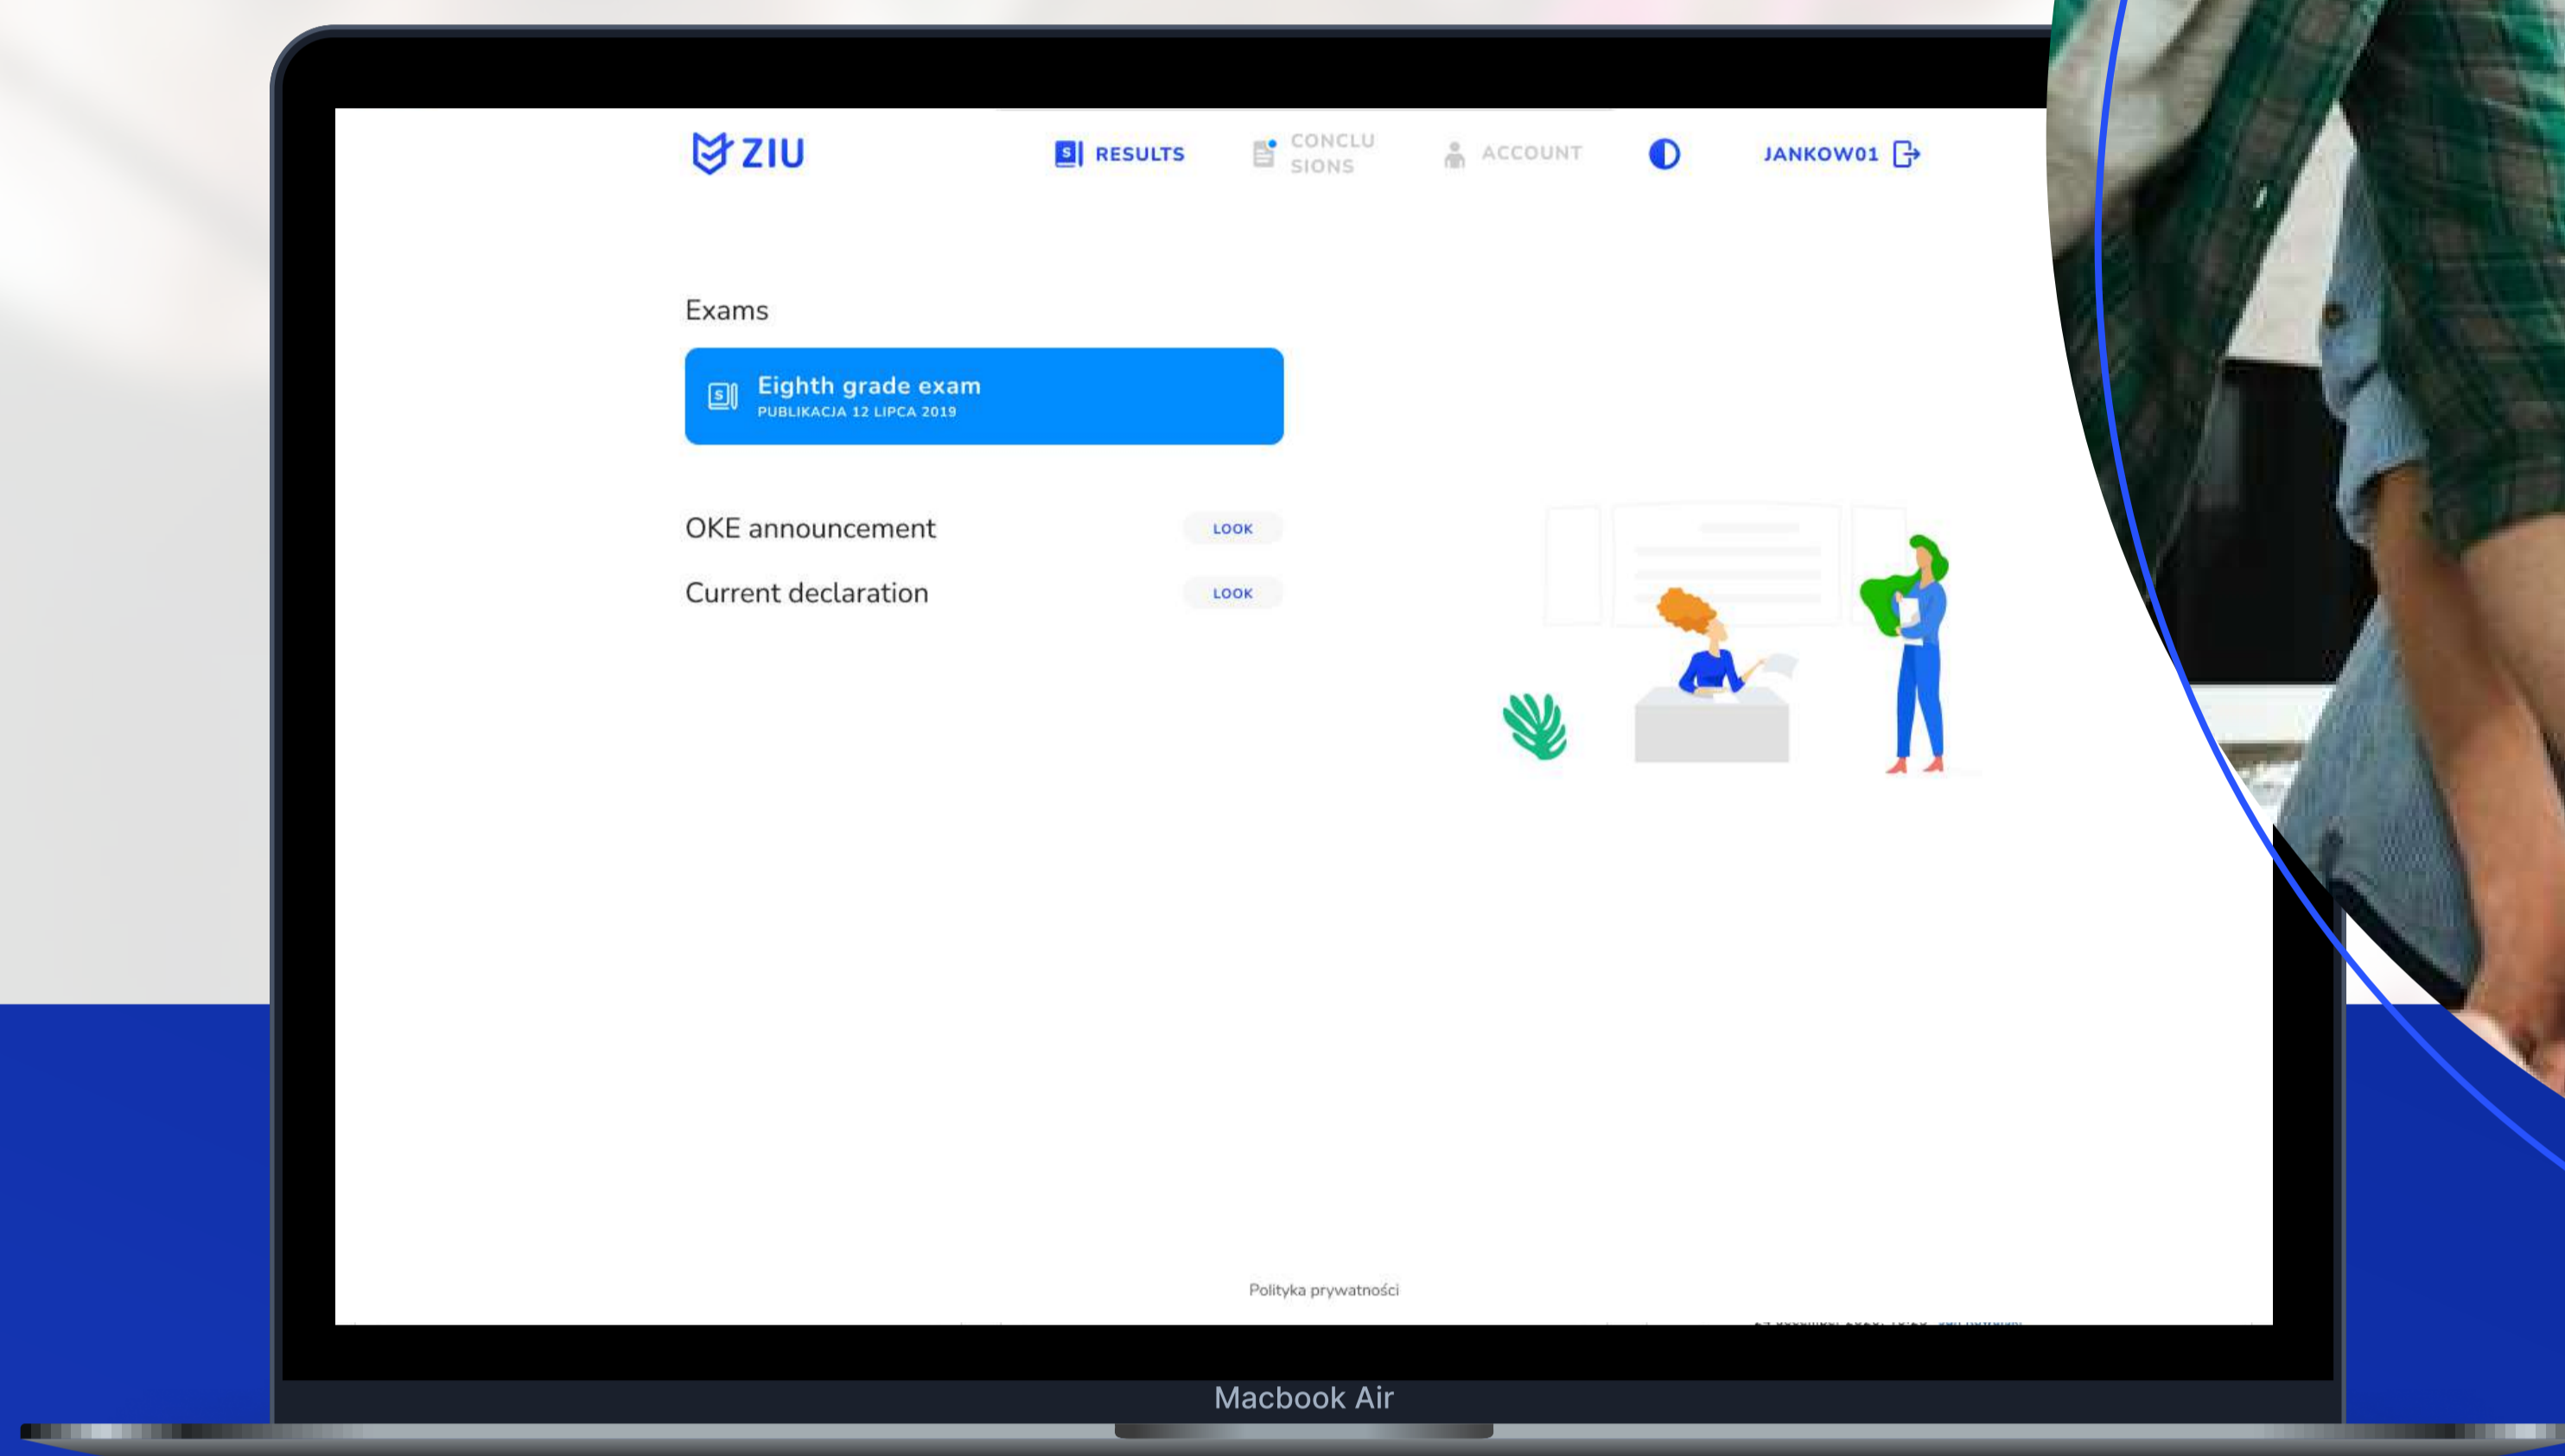

2
Ideation and Wireframing to Organize Complex Data

3
User-Centric Interface Design and WCAG Compliance

Designs

In the design phase of the ZIU application, our primary focus was to create a user-friendly and visually appealing user interface. We aimed for simplicity, minimalism, and compliance with WCAG 2.0 guidelines.

Our design approach involved reducing information clutter and emphasizing efficient data presentation for candidates checking their exam results.

Mockup

In the mockup phase, we translated our design concepts into tangible representations using Figma and collaborated with the client to create user stories and wireframes.

This step was crucial for understanding complex systems, organizing information effectively, and ensuring our design aligned with project goals and user-centered solutions.

Testing

User stories, wireframes, and prototypes were crafted in collaboration with the client.

We incorporated innovative solutions to enhance user experience and reduce information overload, enabling candidates to easily access their exam results.

Coding

We employed the 300DEVs Angular CDK for web application development, implementing features like high-contrast mode for accessibility.

Our coding approach followed the DRY principle, allowing for quick application development and reducing errors.

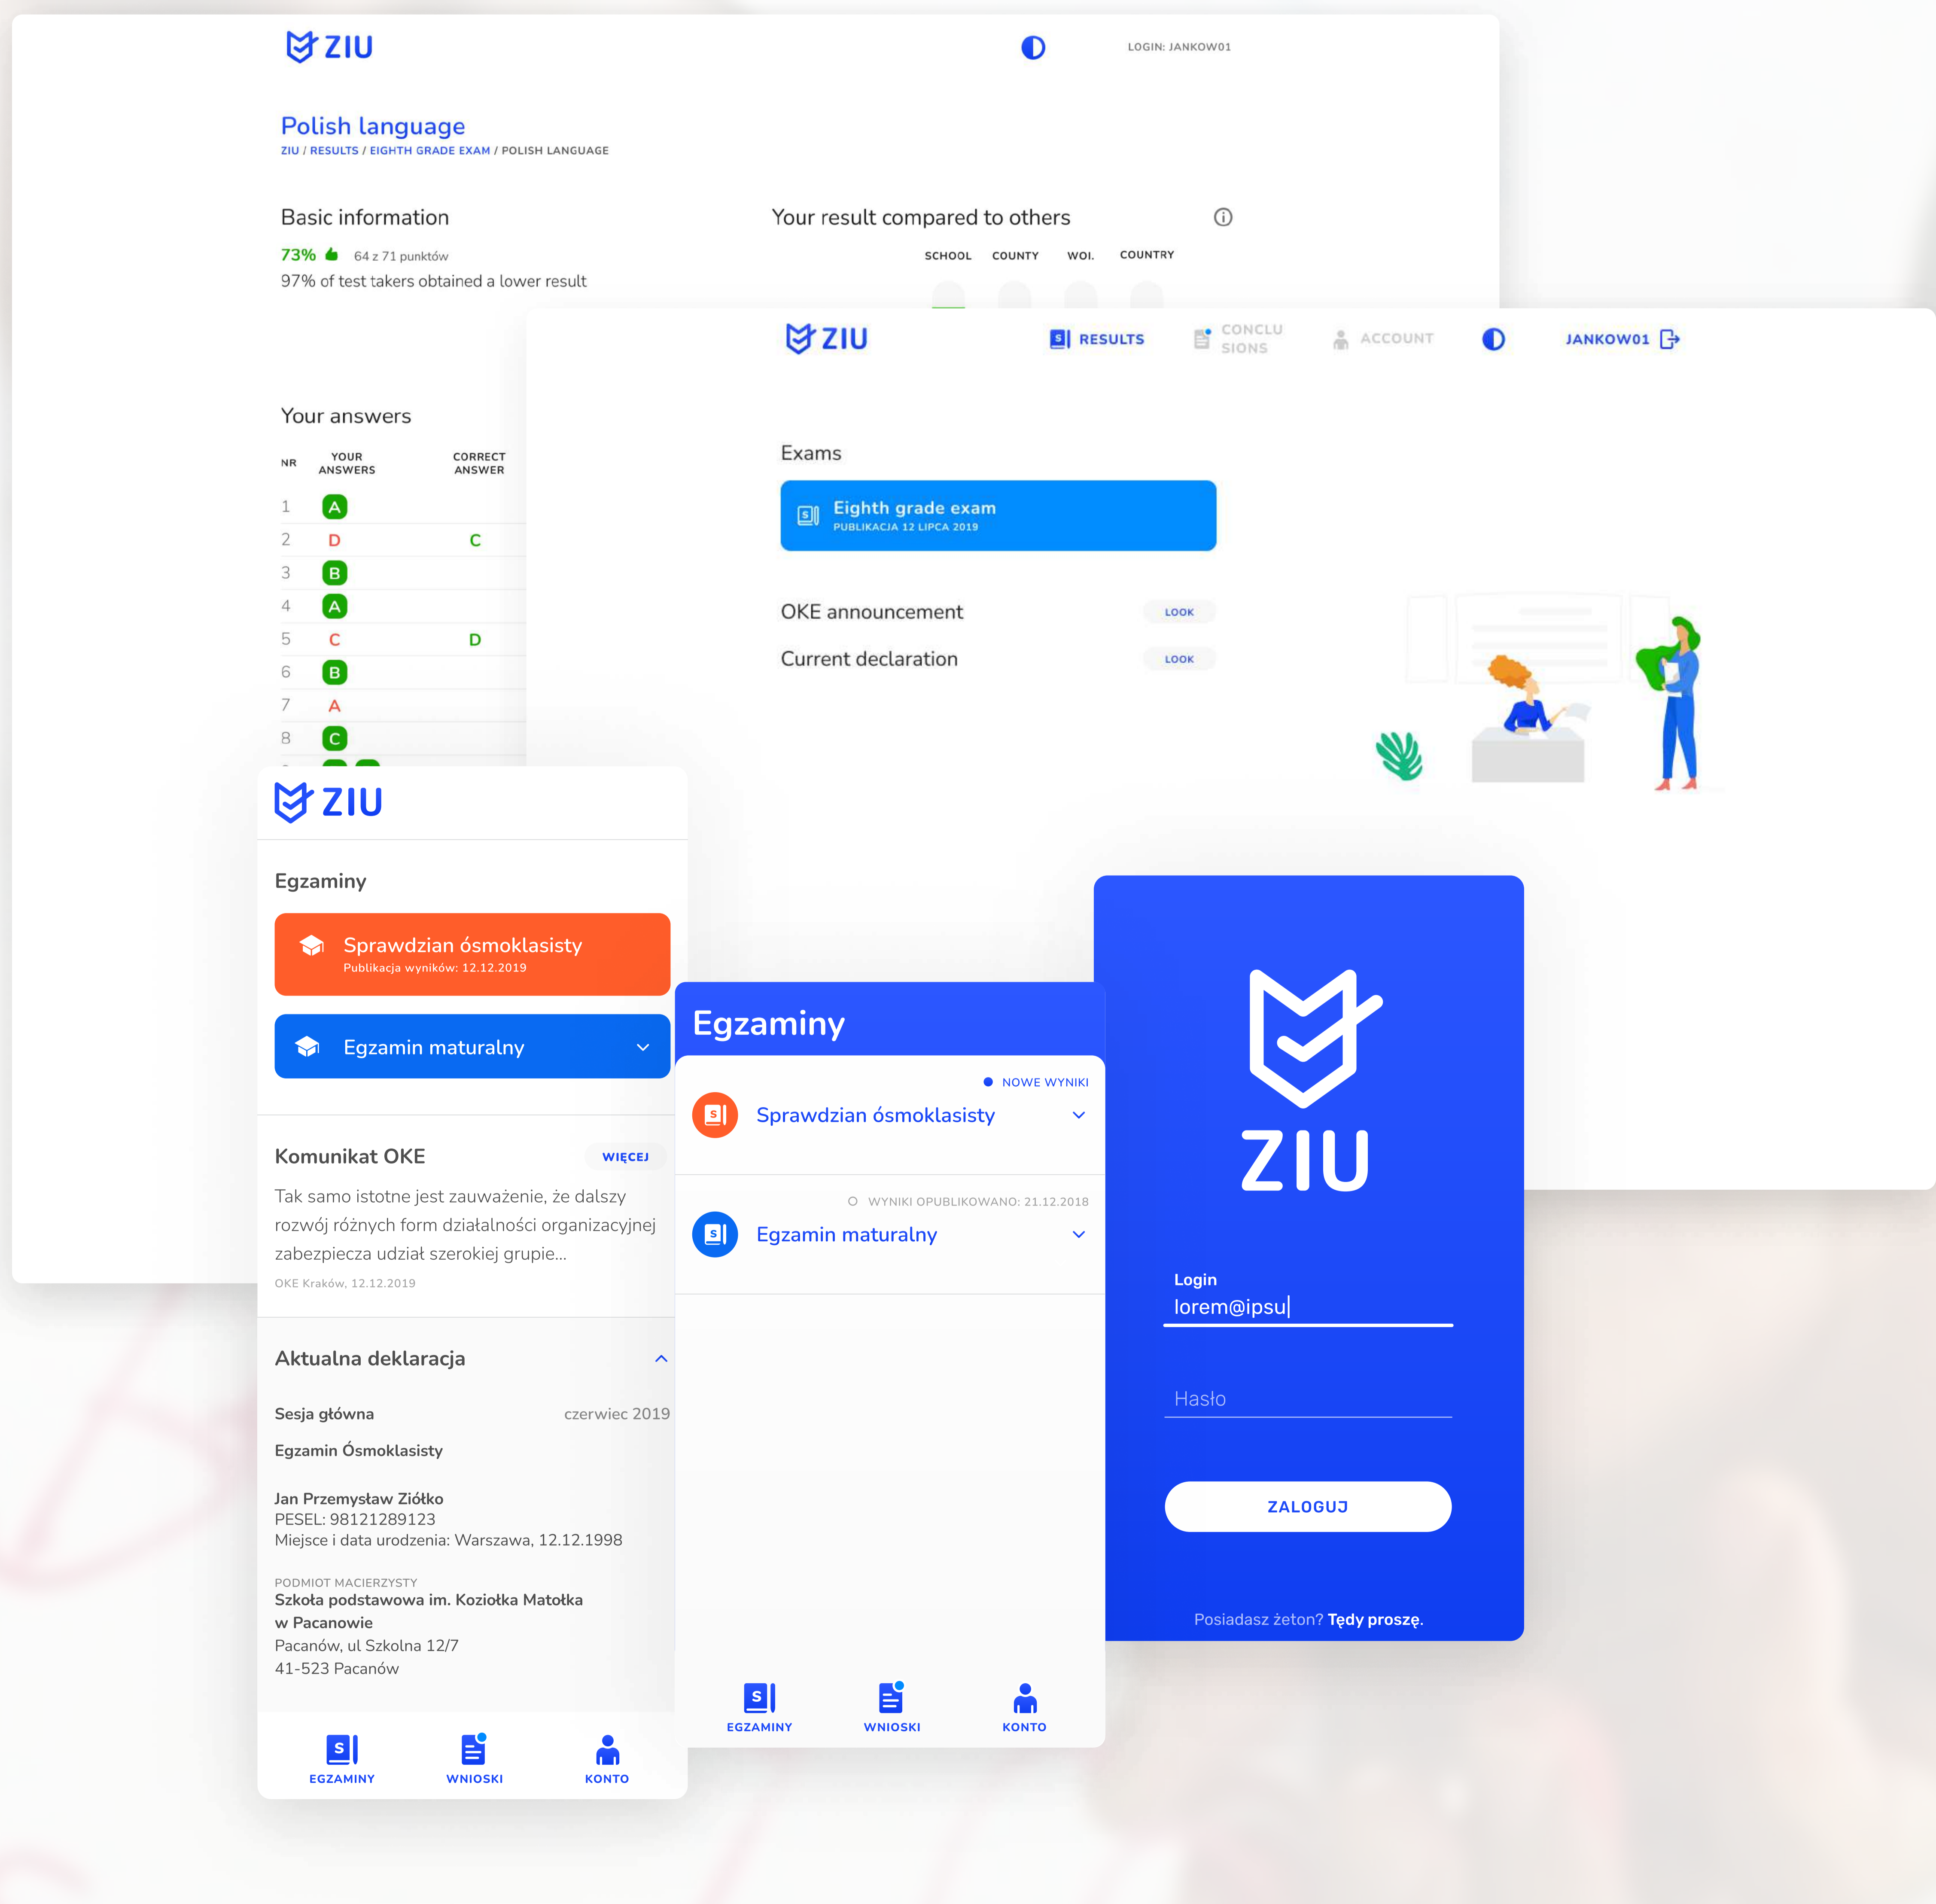

Results

The final version of ZIU offers a minimalist yet highly efficient user interface, making it accessible across various devices.

The application's implementation strictly adheres to WCAG 2.0 guidelines and offers features like high-contrast mode for vision-impaired users, demonstrating a successful outcome for the Ministry of National Education of Poland.

Our achievements highlight our commitment to creating the perfect solution for you. Contact us to discuss tailoring an application to your specific needs.
